Washing your hands stops MRSA.

Why wash?
- MRSA germs live on skin.
- Germs can spread quickly in jails and prisons.
- Washing hands removes germs.

When?
- After touching or blowing your nose.
- Before and after touching broken or infected skin.
- Before and after changing bandages.
- After touching soiled or wet laundry.
- After using the restroom.

How?
- Wash hands with soap and water for 20 seconds.
- Rinse well and dry with a clean towel.
