Occupational Health Guideline for Phenyl Ether-Biphenyl Mixture

INTRODUCTION

This guideline is intended as a source of information for employees, employers, physicians, industrial hygienists, and other occupational health professionals who may have a need for such information. It does not attempt to present all data; rather, it presents pertinent information and data in summary form.

SUBSTANCE IDENTIFICATION

- Formula: \(\text{(C}_6\text{H}_5\text{)}_2\text{O}\) and \(\text{C}_6\text{H}_4\text{C}_6\text{H}_3\)
- Synonyms: Dowtherm A; diphenyl oxide-diphenyl mixture
- Appearance and odor: Straw-colored liquid that darkens on use with an aromatic, somewhat disagreeable odor.

PERMISSIBLE EXPOSURE LIMIT (PEL)

The current OSHA standard for phenyl ether-biphenyl mixture is 1 part of phenyl ether-biphenyl mixture per million parts of air (ppm) averaged over an eight-hour work shift. This may also be expressed as 7 milligrams of phenyl ether-biphenyl mixture per cubic meter of air (mg/m³). The American Conference of Governmental Industrial Hygienists has issued a Notice of Intended Changes of its recommended Threshold Limit Value for phenyl ether-biphenyl mixture from 1 ppm to 0.5 ppm as a vapor.

HEALTH HAZARD INFORMATION

- Routes of exposure
  Phenyl ether-biphenyl mixture can affect the body if it is inhaled, is swallowed, or comes in contact with the eyes or skin.
- Effects of overexposure
  1. Short-term Exposure: Overexposure to phenyl ether-biphenyl mixture may cause irritation of the eyes, nose, and skin. It may also cause nausea.
  2. Long-term Exposure: Repeated or prolonged contact may cause irritation of the skin.
  3. Reporting Signs and Symptoms: A physician should be contacted if anyone develops any signs or symptoms and suspects that they are caused by exposure to phenyl ether-biphenyl mixture.
- Recommended medical surveillance
  The following medical procedures should be made available to each employee who is exposed to phenyl ether-biphenyl mixture at potentially hazardous levels:
  1. Initial Medical Screening: Employees should be screened for history of certain medical conditions (listed below) which might place the employee at increased risk from phenyl ether-biphenyl mixture exposure.
     - Skin disease: Phenyl ether-biphenyl mixture can cause dermatitis on prolonged exposure. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent.
     - Liver disease: Although phenyl ether-biphenyl mixture is not known as a liver toxin in humans, the importance of this organ in the biotransformation and detoxification of foreign substances should be considered before exposing persons with impaired liver function.
     - Kidney disease: Although phenyl ether-biphenyl mixture is not known as a kidney toxin in humans, the importance of this organ in the elimination of toxic substances justifies special consideration in those with impaired renal function.
     - Chronic respiratory disease: In persons with impaired pulmonary function, especially those with obstructive airway diseases, the breathing of phenyl ether-biphenyl mixture might cause exacerbation of symptoms due to its irritant properties.
  2. Periodic Medical Examination: Any employee developing the above-listed conditions should be referred for further medical examination.
- Summary of toxicology
  Phenyl ether-biphenyl mixture is primarily an irritant to

These recommendations reflect good industrial hygiene and medical surveillance practices and their implementation will assist in achieving an effective occupational health program. However, they may not be sufficient to achieve compliance with all requirements of OSHA regulations.
the eyes, skin, and upper respiratory tract. Repeated 8-hour exposures at 182 mg/m³ of a vapor-mist mixture were lethal to some animals within 1-½ months. Long-term (6-month) studies of four species at 7 to 10 ppm showed no significant adverse effects, although these concentrations are extremely nauseating to human subjects and painfully irritating to the eyes and nose. While 1 ppm is tolerable to most individuals, the odor at 0.1 ppm may be objectionable to some. No chronic systemic effects have been reported in humans.

CHEMICAL AND PHYSICAL PROPERTIES

- Physical data
  1. Molecular weight: 166 (average)
  2. Boiling point (760 mm Hg): 257 C (495 F)
  3. Specific gravity (water = 1): 1.05 to 1.07
  4. Vapor density (air = 1 at boiling point of phenyl ether-biphenyl mixture): 5.7 (average)
  5. Melting point: 12 C (54 F)
  6. Vapor pressure at 25 C (77 F): 0.08 mm Hg
  7. Solubility in water, g/100 g water at 20 C (68 F): 0.0014
  8. Evaporation rate (butyl acetate = 1): Data not available

- Reactivity
  1. Conditions contributing to instability: Heat
  2. Incompatibilities: Contact with strong oxidizing agents may cause fires and explosions.
  3. Hazardous decomposition products: Toxic gases and vapors (such as carbon monoxide) may be released in a fire involving phenyl ether-biphenyl mixture.
  4. Special precautions: Phenyl ether-biphenyl mixture will attack some forms of plastics, rubber, and coatings.

- Flammability
  1. Flash point: 124 C (255 F) (open cup)
  2. Autoignition temperature: 621 C (1150 F)
  3. Flammable limits in air, % by volume: Lower: 0.5;
      Upper: 6.2 (at 500 F)
  4. Extinguishing: Foam, dry chemical, carbon dioxide

- Warning properties
  1. Odor Threshold: Patty states, “Experience with human subjects has indicated that concentrations of vapors of Dowtherm A ranging from 0.1 to 1 ppm are readily detected by the olfactory organs and are unpleasant, sometimes producing nausea.” The Documentation of TLV’s states that a TLV of 1 ppm is recommended “to prevent disagreeable, nauseating odor for the majority of exposed workers. As little as 0.1 ppm may be objectionable to some sensitized, exposed individuals. The TLV of 1 ppm is sufficiently low to prevent serious toxic effects but may not eliminate all objectionable symptoms.”
  2. Irritation Levels: Grant states that “when concentrations of 3 or 4 ppm in air are reached, there is irritation of the eyes, nose, and throat.”
  3. Evaluation of Warning Properties: Through its odor and irritant effects, phenyl ether-biphenyl mixture can be detected at a concentration within 3 times the permissible exposure limit. For the purposes of this guideline, this mixture is treated as a material with good warning properties.

MONITORING AND MEASUREMENT PROCEDURES

- General
  Measurements to determine employee exposure are best taken so that the average eight-hour exposure is based on a single eight-hour sample or on two four-hour samples. Several short-time interval samples (up to 30 minutes) may also be used to determine the average exposure level. Air samples should be taken in the employee’s breathing zone (air that would most nearly represent that inhaled by the employee).

- Method

RESPIRATORS

- Good industrial hygiene practices recommend that engineering controls be used to reduce environmental concentrations to the permissible exposure level. However, there are some exceptions where respirators may be used to control exposure. Respirators may be used when engineering and work practice controls are not technically feasible, when such controls are in the process of being installed, or when they fail and need to be supplemented. Respirators may also be used for operations which require entry into tanks or closed vessels, and in emergency situations. If the use of respirators is necessary, the only respirators permitted are those that have been approved by the Mine Safety and Health Administration (formerly Mining Enforcement and Safety Administration) or by the National Institute for Occupational Safety and Health.

- In addition to respirator selection, a complete respiratory protection program should be instituted which includes regular training, maintenance, inspection, cleaning, and evaluation.

PERSONAL PROTECTIVE EQUIPMENT

- Employees should be provided with and required to use impervious clothing, gloves, face shields (eight-inch minimum), and other appropriate protective clothing necessary to prevent repeated or prolonged skin contact
with liquid or solid phenyl ether-biphenyl mixture.
- Non-impervious clothing which becomes contaminated with liquid or solid phenyl ether-biphenyl mixture should be removed promptly and not reworn until the phenyl ether-biphenyl mixture is removed from the clothing.
- Employees should be provided with and required to use dust- and splash-proof safety goggles where liquid or solid phenyl ether-biphenyl mixture may contact the eyes.

SANITATION

- Skin that becomes contaminated with liquid or solid phenyl ether-biphenyl mixture should be promptly washed or showered with soap or mild detergent and water to remove any phenyl ether-biphenyl mixture.
- Employees who handle liquid or solid phenyl ether-biphenyl mixture should wash their hands thoroughly with soap or mild detergent and water before eating, smoking, or using toilet facilities.

COMMON OPERATIONS AND CONTROLS

The following list includes some common operations in which exposure to phenyl ether-biphenyl mixture may occur and control methods which may be effective in each case:

<table>
<thead>
<tr>
<th>Operation</th>
<th>Controls</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use in chemical, petroleum, and nuclear industry as a high-transfer medium used in heating and cooling processes – marked as Dowtherm A, Termix, Diphyl, and Gilothers</td>
<td>General dilution ventilation; local exhaust ventilation; personal protective equipment</td>
</tr>
<tr>
<td>Use as a dye carrier (dyeing aid) for printing and dyeing polyester textiles</td>
<td>Personal protective equipment</td>
</tr>
</tbody>
</table>

EMERGENCY FIRST AID PROCEDURES

In the event of an emergency, institute first aid procedures and send for first aid or medical assistance.

- **Eye Exposure**
  If phenyl ether-biphenyl mixture gets into the eyes, wash eyes immediately with large amounts of water, lifting the lower and upper lids occasionally. If irritation is present after washing, get medical attention. Contact lenses should not be worn when working with this chemical.

- **Skin Exposure**
  If phenyl ether-biphenyl mixture gets on the skin, promptly wash the contaminated skin using soap or mild detergent together with powdered pumice, borax, or other suitable cleansers. If phenyl ether-biphenyl mixture soaks through the clothing, remove the clothing promptly and wash the skin using soap or mild detergent together with powdered pumice, borax, or other suitable cleaners. If irritation persists after washing, get medical attention.

- **Breathing**
  If a person breathes in large amounts of phenyl ether-biphenyl mixture, move the exposed person to fresh air at once. If breathing has stopped, perform artificial respiration. Keep the affected person warm and at rest. Get medical attention as soon as possible.

- **Swallowing**
  When phenyl ether-bisphenyl mixture has been swallowed, get medical attention immediately. If medical attention is not immediately available, get the afflicted person to vomit by having him touch the back of his throat with his finger or by giving him syrup of ipecac as directed on the package. This non-prescription drug is available at most drug stores and drug counters and should be kept with emergency medical supplies in the workplace. Do not make an unconscious person vomit.

- **Rescue**
  Move the affected person from the hazardous exposure. If the exposed person has been overcome, notify someone else and put into effect the established emergency rescue procedures. Do not become a casualty. Understand the facility's emergency rescue procedures and know the locations of rescue equipment before the need arises.

SPILL, LEAK, AND DISPOSAL PROCEDURES

- **Persons not wearing protective equipment and clothing should be restricted from areas of spills or leaks until cleanup has been completed.**
- If phenyl ether-biphenyl mixture is spilled or leaked, the following steps should be taken:
  1. Ventilate area of spill or leak.
  2. For small quantities, absorb or scoop up on paper. Evaporate in a safe place (such as a fume hood). Allow sufficient time for evaporating vapors to completely clear the hood ductwork. Burn the paper in a suitable location away from combustible materials. Large quantities may be reclaimed; however, if this is not practical, dissolve in an appropriate solvent and atomize in a suitable combustion chamber.
- **Waste disposal method:**
  Phenyl ether-biphenyl mixture may be disposed of by dissolving in an appropriate solvent and atomizing in a suitable combustion chamber.
