NPPTL COVID-19 Response: International Respirator Assessment

Manufacturer: Shenzhen Missadola Technology Co., Ltd.
Model Tested: 2626-2
Date Tested: June 3, 2020

Ten respirators were submitted for evaluation. The samples were tested using a modified version of NIOSH Standard Test Procedure (STP) TEB-APR-STP-0059. This modified assessment plan can be found here.

No certificate of approval was provided with the samples received; therefore, the authenticity of the claims cannot be validated.

The maximum and minimum filter efficiency was 67.76% and 64.10%, respectively. All ten respirators measured less than 95%.

While the above-listed product classification has similar performance requirements to NIOSH-approved devices, NIOSH does not have knowledge about the sustained manufacturer quality system and product quality control for these products. NIOSH also does not have knowledge about the product’s handling and exposures after leaving its manufacturer’s control.

In addition, this product is an ear loop design. Currently, there are no NIOSH-approved products with ear loops; NIOSH-approved N95s have head bands. Furthermore, limited assessment of ear loop designs, indicate difficulty achieving a proper fit. While filter efficiency shows how well the filter media performs, users must ensure a proper fit is achieved.

This assessment is not a part of the NIOSH respirator approval process and will in no way lead to or preclude NIOSH approval through the official approval process. This assessment was developed as an assessment of the filter efficiency for those respirator’s represented as certified by an international certification authority, other than NIOSH, to support the availability of respiratory protection to US healthcare workers due to the respirator shortage associated with COVID-19. Only particulate filter efficiency was assessed.

The results provided in this letter are specific to the subset of samples that were provided to NPPTL for evaluation.

These results will be used to update the CDC guidance for Crisis Capacity Strategies (during known shortages).
Evaluation of International Respirators

**Test:** Modified TEB-APR-STP-0059

**Date Tested:** June 3, 2020

**Report Prepared:** June 3, 2020

**Manufacturer:** Shenzhen Missadola Technology Co., Ltd.

**Item Tested:** 2626-2

**Country of Certification:** China (EN149:2001+A1:2009)

**Minimum Filter Efficiency:** 64.10 **Maximum Filter Efficiency:** 67.76

- The test method utilized in this assessment is not the NIOSH standard test procedure that is used for certification of respirators. Respirators assessed to this modified test plan do not meet the requirements of STP-0059, and therefore cannot be considered equivalent to N95 respirators that were tested to STP-0059.
- Respirators tested may not be representative of all respirators with the same certification mark. NIOSH has no control over suppliers and distributors of respirators certified by other national or international parties.
- This assessment is not a confirmation that it conforms with any or all of its specifications in accordance with its certification mark.
- This assessment was not a part of the NIOSH approval program. These results do not imply nor preclude a future approval through the NIOSH respirator approval program.
NPPTL COVID-19 Response: International Respirator Assessment

**1AK N95**

- **EN149:2001+A1:2009 FFP2 NR D**
- **Self-Absorption Filter**
- **Anti-Particulates**
- **Anti-Bacteria**
- **Respirator**

**PM2.5 Filtration Rate ≥95%**

**50 Pieces**

---

**Scope of Application:**

- Suitable for protection from PM2.5 haze particles, food processing, chemical industries, coal dust, cement dust, metal smelting, processing and manufacturing. This product is windproof and protects against cold.
- **Shelf life:** 2 years
- **Production date:** see the seal
- **Grade:** N95
- **Model:** 2626 - 2
- **Standard:** EN 149:2001+A1:2009 FFP2 NR D
- **CIC Certificate Number:** CIC:200308516-ZJ(REV1)
- **Storage conditions:** Keep in a well-ventilated, clean room with humidity < 80%, and no corrosive gases.
- **Application:** Foldable mask (for adults)

⚠️ It is very important to press the nose clip of the mask firmly against the bridge of the nose to form a good fit with the nose.

**Attention:**

- The mask should be kept as flat as possible after use, and the nose bridge at the top of the mask should not be folded frequently in order to prolong the service life.
- It is not recommended to wear a mask if the airflow is not constant, or your breathing is irregular, or you are asleep.
- Not to be used for children under the age of 3, due to their low breathing capacity.
