Subject: Guidelines for Determining the Probability of Causation

Regarding the Notice of Proposed Rulemaking, "Guidelines for Determining the Probability of Causation" (Oct. 5, 2001): This document is based on a formula for the probability of causation that can be drastically incorrect, even in radiation carcinogenesis, as has been shown in many peer-reviewed articles since 1987, including the following (which give further references):
Beyea J, Greenland S. The importance of specifying the underlying biologic model in estimating the probability of causation. Health Physics 1999; 76:269-274.
