SUPPLEMENTARY INFORMATION:
The Consumer Assessment of Health Plans Survey (CAHPS) program was initiated in 1995 to develop a survey and report on consumers’ perspectives on the quality of their health plans. Since that time the CAHPS program, in partnership with CMS and others, has expanded its scope and developed surveys and reports regarding patient assessments of care received from individual clinicians, group practices, in-center hemodialysis services, nursing homes and hospitals. Now, CMS has asked the CAHPS team to develop a survey to obtain the consumer’s perspective on home health care and services.

One of the top priorities of the Centers for Medicare & Medicaid Services is to increase the transparency in healthcare by providing quality and cost information to the public. A critical component missing from the current measurement set for home health agencies is information from the consumer perspective on the quality of care provided. The information collection proposed here will be a field test of a preliminary instrument designed to obtain consumer assessments of home health agency care.

Methods of Collection

This field test will use a two stage sampling approach. The first stage is a convenience sample of Medicaid and/or Medicare certified Home Health Agencies (HHA) and the second stage is a probability sample of each selected HHA’s eligible patients. Thirty-six HHAs across multiple states and home health agency operators will be recruited to participate. The sample of HHAs will vary by size, financial ownership and organizational type (chain or independent). AHRQ anticipates sampling an average of 138 patients per agency.

Each selected patient will be mailed the questionnaire and cover letter. To maximize response rates, follow up activities will include an additional request for participation by mail and by phone call. Individuals contacted will be assured of the confidentiality of their replies under Section 934(c) of the Public Health Service Act.

Estimated Annual Respondent Burden

The survey will be distributed to 4,868 patients with a projected completion rate of 40 percent for a total of 1,948 returned surveys. Responses are estimated at 20 minutes per survey.
