Maine
State Nutrition, Physical Activity, and Obesity Profile

Obesity has important consequences on our nation’s health and economy. It is linked to a number of chronic diseases, including coronary heart disease, stroke, diabetes, and some cancers (NIH Clinical Guidelines, 1998). Among adults, the medical costs associated with obesity are estimated at 147 billion dollars (Finkelstein, 2009). Many American communities are characterized by unhealthy options when it comes to diet and physical activity. We need public health approaches that make healthy options available, accessible, and affordable for all Americans.
CDC’s Division of Nutrition and Physical, and Obesity (DNPAO) supports the nation’s capacity to address public health in all policies and establish successful and sustainable interventions to support healthy eating and active living. The Division provides support (i.e., implementation and evaluation guidance, technical assistance, training, surveillance and applied research, translation and dissemination, and partnership development) to states, communities and national partners to implement policy, system, and environmental strategies. The goal is to improve dietary quality, increase physical activity and reduce obesity across multiple settings—such as child care facilities, workplaces, hospitals and medical care facilities, schools, and communities.

State Population of Maine

- Estimated Total Population 2010\(^{(1)}\) = 1,328,361
- Adults age 18 and over\(^{(2)}\) = 79.3% of the total population in 2010
- Youth under 18 years of age\(^{(1)}\) = 20.7% of the total population in 2010

\(^{(2)}\) Calculated estimated = 100% minus percent of the total population under 18 years old, using State and County QuickFacts, 2010 data from the U.S. Census.

Adult Overweight and Obesity

- **Overweight and Obesity**\(^{(3)}\)
  - 62.9% were overweight, with a Body Mass Index of 25 or greater.
  - 26.8% were obese, with a Body Mass Index of 30 or greater.

- **Dietary Behaviors**\(^{(4)}\)
  - 36.0% of adults reported having consumed fruits at the recommended level of 2 or more times per day.
  - 30.6% of adults reported having consumed vegetables at the recommended level of 3 or more times per day.

- **Physical Activity**\(^{(5)}\)
  - 50.3% of adults achieved at least 300 minutes a week of moderate-intensity aerobic physical activity or 150 minutes a week of vigorous-intensity aerobic activity (or an equivalent combination).
  - 21.2% of Maine’s adults reported that during the past month, they had not participated in any physical activity.

Adolescent Overweight and Obesity

- **Overweight and Obesity**\(^{(6)}\)
  - 15.1% were overweight (≥85\(^{th}\) and < 95\(^{th}\) percentiles for BMI by age and sex, based on reference data).
  - 12.5% were obese (≥95\(^{th}\) percentile BMI by age and sex, based on reference data).

- **Unhealthy Dietary Behaviors**\(^{(6)}\)
  - **Fruit consumption**: 66.0% ate fruits or drank 100% fruit juice less than 2 times per day during the 7 days before the survey (100% fruit juice or fruit).
  - **Vegetable consumption**: 86.2% ate vegetables less than 3 times per day during the 7 days before the survey (green salad; potatoes, excluding French fries, fried potatoes, or potato chips; carrots; or other vegetables).
  - **Sugar-sweetened beverage consumption**: 29.2% drank a can, bottle, or glass of soda or pop (not including diet soda or diet pop) at least one time per day during the 7 days before the survey. (continued on next page)
Physical Activity\(^{(6)}\)

- **Achieved recommended level of activity:** Only 17.9% were physically active* for a total of at least 60 minutes per day on each of the 7 days prior to the survey.
- **Participated in daily physical education:** 6.4% of adolescents attended daily physical education classes in an average week (when they were in school).

Physical Inactivity\(^{(6)}\)

- **No activity:** 18.0% did not participate in at least 60 minutes of physical activity on any day during the 7 days prior to the survey.
- **Television viewing time:** 25.4% watched television 3 or more hours per day on an average school day.

The 2010 Maine School Health Profiles assessed the school environment, indicating that among high schools\(^{(7)}\)

- 52.3% did not sell less nutritious foods and beverages anywhere outside the school food service program.
- 14.4% always offered fruits or non-fried vegetables in vending machines and school stores, canteens, or snack bars, and during celebrations whenever foods and beverages were offered.
- 72.0% prohibited all forms of advertising and promotion of candy, fast food restaurants, or soft drinks in all locations. All school-related locations were defined as in school buildings; on school grounds, including on the outside of the school building, on playing fields, or other areas of the campus; on school buses or other vehicles used to transport students; and in school publications.

Child Overweight and Obesity

Breastfeeding\(^{(8)}\)

Increasing breastfeeding initiation, duration, and exclusivity is a priority strategy in CDC’s efforts to decrease the rate of childhood obesity throughout the United States.

- 73.5% of infants were Ever Breastfed.
- 49.2% of infants were Breastfed for at least 6 months.

Body Mass Index\(^{(9)*}\)

Among Maine’s children aged 2 years to less than 5 years*

- 17.1% were overweight (85th to < 95th percentile BMI-for-Age).
- 14.3% were obese (≥ 95th percentile BMI-for-Age).

\(^{*}\) BMI data only includes low-income children from the PedNSS sample and do not represent all children.

\(^{*}\) BMI data is based on 2000 CDC growth chart percentiles for BMI-for-age for children 2 years of age and older.

Maine’s Response to Obesity

Menu Labeling in Restaurants and Universities

Maine has an existing menu labeling law for chain restaurants. The Maine CDC and its key partners built on the existing law to promote healthier eating on Maine public university campuses. They developed the DineSMART logo, among other informational materials, to help students identify healthy versus less healthy items in select dining services and retail outlets on campuses. There are over 34,000 students in the University of Maine Systems. (continued on next page)
Physical Activity in Afterschool/Childcare

The Maine CDC worked to improve physical activity and nutrition policies in 32 licensed child care centers reaching approximately 2,000 children. The NAP SACC program (Nutrition and Physical Activity Self-Assessment for Child-Care), an evidence based program developed by the University of North Carolina at Chapel Hill, was used by participating centers. Healthy Maine Partnerships (HMPs) received funds to use as an incentive for full day child care centers to implement environmental/policy changes in the child care settings (e.g. physical activity equipment, books, curriculum, teaching tools, etc.) Maine contracted with the Maine Prevention Research Center (MPRC) at UNE and the Maine Nutrition Network (MNN) at the University of Southern Maine to implement this program. The MPRC coordinated the use of NAP SACC with the Healthy Maine Partnerships (HMP). This included development of protocols, monitoring progress, consolidating data collected, reporting results, disseminating funds, among other duties. The MNN developed and conducted training, technical assistance and dissemination of program materials. The 5 workshops offered to child care providers included: Childhood Obesity, Nutrition for Young Children; Physical Activity for Young Children; Personal Health and Wellness for Staff; Working with Families to Promote Healthy Weight Behaviors. Approximately 2,400 Healthy Habits for Life child care resource kits to help support healthy habits in child care have been distributed.
