

Vermont *State Nutrition, Physical Activity, and Obesity Profile*

Obesity has important consequences on our nation's health and economy. It is linked to a number of chronic diseases, including coronary heart disease, stroke, diabetes, and some cancers (NIH Clinical Guidelines, 1998). Among adults, the medical costs associated with obesity are estimated at 147 billion dollars (Finkelstein, 2009). Many American communities are characterized by unhealthy options when it comes to diet and physical activity. We need public health approaches that make healthy options available, accessible, and affordable for all Americans.

Vermont - State Nutrition, Physical Activity, and Obesity Profile

CDC's Division of Nutrition and Physical, and Obesity (DNPAO) supports the nation's capacity to address public health in all policies and establish successful and sustainable interventions to support healthy eating and active living. The Division provides support (i.e., implementation and evaluation guidance, technical assistance, training, surveillance and applied research, translation and dissemination, and partnership development) to states, communities and national partners to implement policy, system, and environmental strategies. The goal is to improve dietary quality, increase physical activity and reduce obesity across multiple settings—such as child care facilities, workplaces, hospitals and medical care facilities, schools, and communities.

State Population of Vermont

- Estimated Total Population 2010⁽¹⁾
= 625,741
- Adults age 18 and over⁽²⁾
= 79.3% of the total population in 2010
- Youth under 18 years of age⁽¹⁾
= 20.7% of the total population in 2010

⁽¹⁾ U.S. Census Bureau. State and County QuickFacts. 2011. Available online at <http://quickfacts.census.gov/qfd/index.html>

⁽²⁾ Calculated estimated = 100% minus percent of the total population under 18 years old, using State and County QuickFacts, 2010 data from the U.S. Census.

Adult Overweight and Obesity

Overweight and Obesity⁽³⁾

- 57.7% were overweight, with a Body Mass Index of 25 or greater.
- 23.2% were obese, with a Body Mass Index of 30 or greater.

Dietary Behaviors⁽⁴⁾

- 38.9% of adults reported having consumed fruits at the recommended level of 2 or more times per day.
- 30.3% of adults reported having consumed vegetables at the recommended level of 3 or more times per day.

Physical Activity⁽⁵⁾

- 52.8% of adults achieved at least 300 minutes a week of moderate-intensity aerobic physical activity or 150 minutes a week of vigorous-intensity aerobic activity (or an equivalent combination).
- 20.2% of Vermont's adults reported that during the past month, they had not participated in any physical activity.

Adolescent Overweight and Obesity

Overweight and Obesity⁽⁶⁾

- 13.6% were overweight ($\geq 85^{\text{th}}$ and $< 95^{\text{th}}$ percentiles for BMI by age and sex, based on reference data).
- 12.2% were obese ($\geq 95^{\text{th}}$ percentile BMI by age and sex, based on reference data).

Unhealthy Dietary Behaviors⁽⁶⁾

- **Fruit consumption:** 66.2% ate fruits or drank 100% fruit juice less than 2 times per day during the 7 days before the survey (100% fruit juice or fruit).
- **Vegetable consumption:** 84.9% ate vegetables less than 3 times per day during the 7 days before the survey (green salad; potatoes, excluding French fries, fried potatoes, or potato chips; carrots; or other vegetables).
- **Sugar-sweetened beverage consumption:** 22.9% drank a can, bottle, or glass of soda or pop (not including diet soda or diet pop) at least one time per day during the 7 days before the survey.

Vermont - State Nutrition, Physical Activity, and Obesity Profile

Physical Activity⁽⁶⁾

- **Achieved recommended level of activity:** Only 23.7% were physically active* for a total of at least 60 minutes per day on each of the 7 days prior to the survey.
- **Participated in daily physical education:** 19.4% of adolescents attended daily physical education classes in an average week (when they were in school).

Physical Inactivity⁽⁶⁾

- **No activity:** 13.2% did not participate in at least 60 minutes of physical activity on any day during the 7 days prior to the survey.
- **Television viewing time:** Data Not Available.

The 2010 Vermont School Health Profiles assessed the school environment, indicating that among high schools⁽⁷⁾

- 46.0% did not sell less nutritious foods and beverages anywhere outside the school food service program.
- 23.4% always offered fruits or non-fried vegetables in vending machines and school stores, canteens, or snack bars, and during celebrations whenever foods and beverages were offered.
- 58.8% prohibited all forms of advertising and promotion of candy, fast food restaurants, or soft drinks in all locations. All school-related locations were defined as in school buildings; on school grounds, including on the outside of the school building, on playing fields, or other areas of the campus; on school buses or other vehicles used to transport students; and in school publications.

Sources of Adolescent Obesity, Fruit and Vegetable, Sugar-sweetened Beverages, and Physical Activity Data:

* Physical activity defined as "any kind of physical activity that increases your heart rate and makes you breathe hard some of the time."

Child Overweight and Obesity

Breastfeeding⁽⁸⁾

Increasing breastfeeding initiation, duration, and exclusivity is a priority strategy in CDC's efforts to decrease the rate of childhood obesity throughout the United States.

- 85.2% of infants were Ever Breastfed.
- 63.2% of infants were Breastfed for at least 6 months.

Body Mass Index^{(9)*}

Among Vermont's children aged 2 years to less than 5 years *

- 15.6% were overweight (85th to < 95th percentile BMI-for-Age).
- 12.2% were obese (\geq 95th percentile BMI-for-Age).

Sources of Breastfeeding Data:

⁽⁸⁾ CDC. Division of Nutrition, Physical Activity, and Obesity Breastfeeding Report Card 2011. Centers for Disease Control and Prevention National Immunization Survey, Provisional Data, 2008births. Available online at <http://www.cdc.gov/breastfeeding/data/reportcard2.htm>

Sources of Child Obesity Data:

⁽⁹⁾ CDC. Division of Nutrition, Physical Activity, and Obesity. 2010 Pediatric Nutrition Surveillance System, Table 6 (PedNSS). http://www.cdc.gov/pednss/pednss_tables/tables_health_indicators.htm

* BMI data only includes low-income children from the PedNSS sample and do not represent all children.

* BMI data is based on 2000 CDC growth chart percentiles for BMI-for-age for children 2 years of age and older.

Vermont's Response to Obesity

The Vermont Health Department (VDH) funded communities to implement healthier choices in corner stores and/or projects related to healthy planning and proposed zoning using the newly developed Healthy Community Design Resource. Grantees were funded from September 2011 to February 2012 with the rest of the year sustained by Vermont's Public Health Infrastructure grant. (continued on next page)

Vermont - State Nutrition, Physical Activity, and Obesity Profile

Built Environment

The state hired a contractor to develop a Vermont Healthy Community Design Resource. The contractor worked with state experts, including planners, and professionals at the Vermont Departments of Health, Transportation and Agriculture through an advisory committee to review and contribute to each section. In addition, the contractor worked with a planner who wrote a Topic Paper for the Vermont Land Use Planning and Implementation Manual (a resource for local and regional planners and product of the Vermont Land Use Education and Training Collaborative). The topic paper is being distributed to local and regional planners. The Vermont Healthy Community Design Resource is in the final stages of development. Three trainings on the Resource were held in November 2011 at various locations around the state. The training brought together community grantees, health department staff, town and regional planners, the Vermont League of Cities and Towns, Transportation professionals, bike and pedestrian advocates. The state awarded six new grants to communities for developing and implementing policy, systems and/or environmental level strategies related to healthy eating and physical activity, and three grants to communities to implement the Healthy Retailer project.

Healthy Retailer

All 16 funded coalitions conducted community assessments and store audits for The Small Change Big Impact Retailer project. VDH put the Community Survey on Survey Monkey for coalitions to be able to data enter their surveys directly and for centralized analysis. VDH provided bi-weekly reports to the coalitions to inform them of the number of surveys completed in their areas. Once the coalitions completed their data collection, VDH generated a report for them to use for planning next steps. Supporting materials for the project were distributed to all current coalitions working on the healthy retail project. Additional materials were provided as needed.
