A mother’s oral health status is a strong predictor of her child’s oral health status. If mothers have high levels of untreated cavities or tooth loss, their children are 3X more likely to have cavities.

Oral health is essential to general health and well-being across the lifespan.

During pregnancy, women may be more prone to gum disease and cavities.

Dental care is **safe and important** during pregnancy.

Seek routine and emergency dental care at any stage of pregnancy.
