PUBLIC HEALTH EMERGENCY PREPAREDNESS COOPERATIVE AGREEMENT (PHEP) PROGRAM

NEW YORK

PHEP Then

In response to the deadly events of September 11, 2001, and the subsequent anthrax attacks, Congress established a new program to help health departments across the nation prepare for emergencies. Since then CDC's Public Health Emergency Preparedness (PHEP) program has partnered with state, local, and territorial public health departments to prepare for, withstand, and recover from potentially devastating public health emergencies.

Every year since, the PHEP program has provided vital resources to ensure communities can effectively respond to infectious disease outbreaks, natural disasters, and chemical, biological, radiological, or nuclear events.

PHEP Now

In 2018, PHEP provided \$620 million across public health departments to improve response readiness. Funds are also used to support epidemiologists (disease detectives), lab staff, planners, and other preparedness staff on the ground.

In the future, CDC will continue supporting PHEP recipients by sharing technical expertise, best practices, and lessons learned, along with tools and resources to identify and address gaps.

AT A GLANCE

In New York

- ▶ 19.8 million residents
- ▶ 79% reside in Cities Readiness Initiative metropolitan statistical areas (CRI MSA). A federally funded program, CRI helps cities effectively respond to large-scale public health emergencies requiring life-saving medications and medical supplies.
- ▶ 58 local public health departments

Frequent Public Health Emergencies

- ▶ Infectious Disease Outbreaks
- ► Flooding
- ► Tropical Storms/Hurricanes

Key Emergency Operations Center Activations

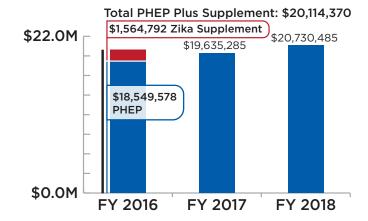

- ▶ 2017: Winter Storm Stella
- ▶ 2018: Winter Storm Quinn

PHEP funds programs and activities that build and strengthen the nation's preparedness for public health emergencies.

Preparedness and Response Funding Snapshot

FY 2018 PHEP \$20,730,485

Base Plus Population \$16,066,980 Cities Readiness Initiative \$1,791,571 Level 1 Chemical Lab \$2.871.934

PHEP IN ACTION—EXPERTISE DEVELOPED THROUGH PHEP KEEPS RESIDENTS SAFE AND HEALTHY DURING FLOODING

In New York, PHEP supports exercises in emergency management and crisis and emergency risk communications so health departments can effectively respond to public health emergencies. On August 14, 2018, Seneca County experienced a rare flooding event that put lives at risk and caused millions of dollars in damage. Using the skills they developed in the exercises, PHEP-supported staff, alongside local staff, developed an incident action plan and managed response operations. They also disseminated health messages related to flood safety, mold, and disaster relief services. Thanks to the PHEP staff's training and experience, the state successfully kept residents safe and healthy before, during, and after the flood.

CDC identified 15 public health preparedness capabilities critical to public health preparedness.

2018 NEW YORK TOP PHEP CAPABILITY INVESTMENTS

- 1. Public Health Laboratory Testing
- 2. Information Sharing
- 3. Medical Countermeasure Dispensing
- 4. Public Health Surveillance & Epidemiologic Investigation
- 5. Medical Materiel Management & Distribution

For a complete list of all 15 public health preparedness capabilities, visit https://www.cdc.gov/cpr/readiness/capabilities.htm.

Medical Countermeasure Readiness: Ensuring that medicine and supplies get to those who need them most during an emergency.

KEY STRENGTH

KEY CHALLENGE

State maintains a significant cache of medical countermeasures to expedite the initiation of dispensing operations

Receiving, staging, and storage sites are distant from western New York state population centers

States, territories, and localities are required to develop emergency plans covering children, pregnant women, and other vulnerable populations.

| Population | 2017 |
|--|------|
| Households included children | 37% |
| Respondents who know they are pregnant | 4% |
| Respondents 65 or older | 20% |
| Respondents who reported having diabetes | 10% |
| Respondents who reported a condition that limits activities | 19% |
| Respondents who reported a health problem that required the use of specialized equipment | 9% |

PHEP funds support staff who have expertise in many different areas.

| PHEP-Funded Staff | 2017 |
|----------------------|------|
| CDC Field Staff | 1 |
| Educators | 5 |
| Epidemiologists | 2 |
| Health Professionals | 3 |
| Laboratorians | 9 |
| Other Staff | 68 |

PHEP PROGRAM-KEY PERFORMANCE MEASURE RESULTS

In an emergency, it is critical that staff can meet quickly to plan for, lead, and manage a public health response. Public health staff serve as Incident Commanders, Public Information Officers, Planning Section Chiefs, Operations Section Chiefs, and other response roles.

| Emergency Operations Coordination | 2015 | 2016 | 2017 |
|--|------|------|------|
| Number of minutes for public health staff with incident management lead roles to report for immediate duty | 34 | 36 | 28 |

Timely and effective communication between lab and epidemiologic staff can reduce death and injuries in a public health emergency.

Public Health Laboratory Testing 2017

Results of communication drills between laboratory and epidemiological staff completed within 45 minutes

Drill 1: Completed drill in time Drill 2: Completed drill in time

Laboratory Response Network biological (LRN-B) and PulseNet labs rapidly identify and notify CDC of potential biological health threats to minimize disease outbreaks. CDC manages the LRN-B, a group of public health labs with testing capabilities to detect and confirm biological health threats. CDC also manages PulseNet, a national network of labs that analyzes and connects foodborne illness cases together to identify outbreak sources.

Current number of LRN-B public health labs: 3

| Public Health Laboratory Testing: LRN-B | 2015 | 2016 | 2017 |
|--|-----------------------|-----------------------|----------------------|
| Proportion of LRN-B proficiency tests passed | 2/2 | 2/2 | 2/2 |
| Public Health Laboratory Testing: PulseNet | 2015 | 2016 | 2017 |
| Percentage of <i>E. coli</i> -positive tests analyzed and uploaded into PulseNet national database within four working days | 100% (target: 90%) | 100% (target: 90%) | 94% (target: 90%) |
| Percentage of <i>Listeria</i> -positive tests analyzed and uploaded into PulseNet national database within four working days | 100% (target: 90%) | 100% (target: 90%) | 96% (target: 90%) |

LRN chemical (LRN-C) labs rapidly identify exposures to toxic chemicals, aid diagnoses, and minimize further human exposures. CDC manages the LRN-C, a group of labs with testing capabilities to detect and confirm chemical health threats. LRN-C labs are designated as Level 1, 2, or 3, with Level 1 labs demonstrating the most advanced capabilities.

Current number and level of LRN-C Labs: 1 (Level 1)

| Public Health Laboratory Testing: LRN-C | 2015 | 2016 | 2017 |
|---|--------|--------|--------|
| Proportion of core chemical agent detection methods demonstrated by Level 1 or Level 2 labs | 9/9 | 9/9 | 9/9 |
| Number of additional chemical agent detection methods demonstrated by Level 1 or Level 2 labs | 4 | 4 | 4 |
| Result of LRN exercise to collect, package, and ship samples | Passed | Passed | Passed |
