

Category: General Administration
Policy #: CDC-GA-2002-09 (Formerly CDC-101)
Date of Issue: 9/27/2002; Revised 9/3/2008; Revised 12/19/2013¹
Proponent: Office of Science (OS)
Application: All CDC Domestic and International Locations
Applicable Staff: All Employees and Non-Employees

PEER REVIEW OF RESEARCH AND SCIENTIFIC PROGRAMS

- Sections:**
1. [PURPOSE AND SCOPE](#)
 2. [BACKGROUND](#)
 3. [POLICY](#)
 4. [RESPONSIBILITIES](#)
 5. [REFERENCES](#)
 6. [ABBREVIATIONS AND ACRONYMS](#)
 7. [DEFINITIONS](#)

Appendix: [CDC/ATSDR PEER REVIEW AGENDA](#)

1. PURPOSE AND SCOPE

This policy provides general guidance on the requirements for external peer review of all extramural and intramural research at the Centers for Disease Control and Prevention (CDC)². This policy also includes external peer review of scientific programs and public health practice (non-research) conducted by the CDC (see Section 5, Item A).

This policy applies to employees³ and non-employees⁴ and to all CDC's Centers, Institute, and Offices (CIOs) and Business Services Offices, which are hereafter called "CDC Components"⁵ unless otherwise noted.

2. BACKGROUND

¹ This policy has been revised to update CDC Operational Policy format, CDC nomenclature, and links to references provided in the policy.

² References to CDC also apply to the Agency for Toxic Substances and Disease Registry (ATSDR).

³ For the purposes of this policy, the term "employees" consists of members of the civil service, Commissioned Corps officers, and locally employed staff. For more information on these categories, refer to "Employee Categories (Updated July 2018).

⁴ For the purposes of this policy, the term "non-employees" includes individuals who provide consistent services to CDC, or maintain a regular presence on a CDC facility, or have been issued a physical or logical access credential and are funded by CDC-managed appropriations. As used in this policy, non-employees include groups of individuals such as guest researchers, contractors, Intergovernmental Personnel Act (IPA) personnel, or students. For more information on these categories, refer to "Non-Employee Categories (Updated July 2018).

⁵ More information on CDC organizational nomenclature is available at: <https://sbi.cdc.gov/DOA/pdf/orgnom.pdf>.

The concept of peer review is strongly accepted by the scientific community. Peer review provides confidence that funding for research and scientific programs supports the most meritorious ideas and projects.

Peer review is critical to enable CDC to achieve greater and more effective public health impact. Peer review activities relate directly to two strategic imperatives: effective public health research and accountability. The critical review of research and scientific programs based on the principles of merit will enable CDC to maintain progress in achieving its health protection goals.

Since 1994, the Office of Management and Budget (OMB) has expected federal agencies engaged in research and development activities to enhance the utilization of merit review with peer review for competitive selection of projects and programs. In January 2002, OMB issued "Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies" (See Section 5, Item B). The guidelines establish that technical information subjected to formal and independent external peer review is presumptively objective. Operating Divisions (OPDIVs) of the Department of Health and Human Services (HHS), including CDC, is subject to these guidelines. This updated policy supports and is governed by Code of Federal Regulations Title 42 Part 52 (42 CFR 52, Grants for Research, see Section 5, Item C) and [HHS Grants Policies and Regulations](#).

3. POLICY

All research and scientific programs conducted or funded by CDC are subject to periodic external peer review as described below.

A. Research

1) Extramural Research

All extramural research applications submitted to CDC are required to go through external peer review by a Federal Advisory Committee, except in justified emergency situations. In such situations, the CIO director must submit written justification requesting an exception from this policy. Approval is granted by the CDC Office of Science (OS) or their designee in consultation with the Office of Financial Resources (OFR).

This policy applies to extramural research funded by grants or cooperative agreements, including institutional awards to research centers that support centralized resources and facilities shared by extramural investigators conducting research.

2) Intramural Research and Scientific Programs

Scientific programs (including research and non-research, and intramural and extramural activities), conducted or funded by CDC are subject to external peer review for scientific and technical quality. CIO directors are encouraged to implement a strategic and flexible approach to external peer review of scientific programs so that it effectively addresses specific program needs. For example, a CIO may elect to conduct peer review arranged by total portfolio, individual project studies, organizational structure, or cross-cutting topic. Core service activities, such as animal laboratory facilities or clinical pathology laboratories, may be subject to accreditation or audit review and also require peer

review. At the discretion of the CIO, other core service activities may also benefit from periodic external audits and/or program reviews.

B. Peer Review Requirements

External peer review of research and non-research activities is a rigorous process that identifies strengths, weaknesses, gaps, redundancies and research or program effectiveness to provide a basis for informed decisions regarding scientific direction, scope, prioritization, and financial stewardship. Specific procedures for each type of review are referenced in the appropriate sections below.

1) Extramural Research

Extramural research typically undergoes sequential peer review. The first-level review is conducted by a panel of experts for the purpose of evaluating the scientific and technical merit of research applications. The second-level review involves a separate senior advisory panel whose purpose is to evaluate the preliminary recommendations (merit evaluations and rankings) from the first-level review in the context of program relevance or priorities, policy considerations, and fiscal capacity.

Procedures to conduct peer review of new extramural research applications and continuation awards can be found in the CDC Handbook for Peer Reviewers.

2) Intramural Research and Scientific Programs

Peer review of intramural research and scientific programs must address program quality, approach, direction, capability, and integrity. In addition, at the request of the CIO, external peer reviewers may also address mission relevance and impact of scientific programs. Peer reviews may be conducted by Boards of Scientific Counselors (BSCs), Special Emphasis Panels (SEPs), or other “ad hoc” groups. If reviewers are recruited on an ad hoc basis, outside of a Federal Advisory Committee Act (FACA) committee, they must provide individual and independent comments of findings, and consensus decisions must be avoided (See Section 5, Items G-I).

Peer review of intramural research and scientific programs can be accomplished through a variety of mechanisms. The approach used for peer review may consist of portfolio or program review of major research topics, of work conducted in discrete organizational units, or review of single studies. Reviews may be conducted on site, by mail, by telephone conference, or by any other means that effectively supports the

3) Contract Administration

The contract administration process, including selection criteria and review, is regulated by the FAR (Federal Acquisition Regulations, see Section 5, Item J). Contract proposals are evaluated in a two-step process. The first step is a review conducted by a technical evaluation panel (TEP) of experts organized according to scientific disciplines or specialty research area. Chartered FACA committees, comprised of external members, may also be utilized to conduct technical evaluations of contract proposals. The second step is a review conducted by the contracting officer, the project officer, and the TEP, if needed, to determine the competitive range and negotiation of best and final offers. The

contract award is made by the OFR, contracting officer in consultation with the CIO director or his/her designee.

Task orders (TOs) are also used to authorize work required under a contract. Because the FAR do not regulate selection criteria and review of TOs, CDC can determine procedures provided each applicant is given a fair opportunity to be considered. Task orders will be reviewed and selected using existing OFR guidance and procedures.

For specific guidance related to Peer Review of Research Contracts, please consult with OFR.

4. RESPONSIBILITIES

A. Centers, Institute, and Offices (CIOs)

- The Directors of CIOs are responsible for the implementation of this policy and annual reporting of planned and completed peer review activities to the OS. An optional template for summarizing key findings from peer review is available from OS. CIOs have responsibility for managing BSCs that are established at the CIO level, and to ensure that these BSCs are available to support peer review for any Center or Division that is located within the CIO.
- In coordination with CDC's Federal Advisory Committee Management Officer, the CIO will ensure that reviews are conducted by experts external to CDC, not affiliated with the program and without conflict of interest.

B. CDC Office of Science, Director

- The Director for OS is responsible for providing overall guidance, as needed, to CIOs to implement and to assess the utility, and effectiveness of the peer review process.
- The Director for OS, in consultation with the OFR, when appropriate, is responsible for granting exclusions to this policy.

C. CDC Federal Advisory Committee Management Officer

CDC's Federal Advisory Committee Management Officer, in coordination with CIOs, will ensure that reviews are conducted by experts external to CDC, not affiliated with the program and without conflict of interest.

D. CDC Office of Financial Resources (OFR)

The roles and responsibilities of OFR as they relate to this policy are outlined in the Peer Review Manual (See Section 5, Item F) and Chapter 1.04 of the HHS Grants Policy Directive (See Section 5, Item E).

E. CDC Strategic Business Initiatives Unit (SBI)

The roles and responsibilities of SBI as they relate to this policy are outlined in the Federal Advisory Committee Management Brochure (See Section 5, Item K) and the Special Emphasis Panel Guide (See Section 5, Item L).

6. ABBREVIATIONS AND ACRONYMS

BSC – Board of Scientific Counselors
CDC – Centers for Disease Control and Prevention
CIO – Centers, Institutes, and Offices
DHHS – Department of Health and Human Services
EISC – CDC Excellence in Science Committee
FACA – Federal Advisory Committee Act
FAR – Federal Acquisition Regulations
NIH – National Institutes of Health
OFR – Office of Financial Resources
OMB – Office of Management and Budget
OPDIV – Operating Division
OS – Office of Science
R&D – Research and Development
SBI – Strategic Business Initiatives Unit
TEP – Technical Evaluation Panel
TO – Task Order

6. DEFINITIONS

Boards of Scientific Counselors (BSCs) – BSCs are FACA committees established to advise the Secretary, HHS, and the Director, CDC concerning strategies and goals for programs and research within the CIOs conduct peer review of scientific programs and monitor the overall strategic direction and focus of the CIO.

CDC Staff – For the purpose of this policy, CDC staff refers to full-time equivalents (FTEs).

Dissemination – The process of opening a subject for widespread debate or discussion.

External Peer Review – The process includes independent assessment of research and scientific programs by experts who are external to CDC. Reviewers must provide written assurance that their reviews are free of real or perceived conflicts of interest. Peer review addresses scientific technical quality and, as appropriate, assesses mission relevance, impact, and direction.

Federal Advisory Committee Act (FACA) of 1972 (Public Law 92-463) – Government advisory committees are formally established through FACA (See Section 5, Item I).

Non-research (Public Health Practice) – Non-research activities include surveillance, specialized investigations, public health program, services and response, and program evaluation. Similarly, reporting the results of these activities is also considered non-research. The primary intent of non-research is to prevent or control disease or injury and improve health, or to improve a public health program or service for a population.

Non-research Support Activities – Non-research activities may also include support activities that serve the needs of either research or public health practice and that are subject to accreditation, audit, or performance review. These support activities might include:

- Laboratory animal facilities
- Core clinical, pathology, and analytical chemistry laboratories
- Mathematical and statistical services
- The conduct and administration of peer review activities

Research – Research is a systematic investigation, including development, testing, and evaluation, that is designed to develop or contribute to generalizable knowledge. Activities which meet this definition constitute research for purposes of this policy, whether or not they are conducted or supported under a program which is considered non-research for other purposes (See Section 5, Item A). Decisions regarding whether a project is research or non-research should be based on guidance in the CDC Human Subjects Research document “*Policy for Distinguishing Public Health Research and Public Health Nonresearch*” (See Section 5, Item A).

- **Extramural Research** – Research activities funded through an assistance mechanism (i.e., grant or cooperative agreement)
- **Intramural Research** – Research activities directed by CDC or funded through an acquisition mechanism (i.e., contract)
Note: It does not include research funded through an assistance mechanism as defined above.

Scientific Program – For the purpose of this policy, the term “scientific program” includes, but is not necessarily limited to, intramural and extramural research and non-research (e.g., public health practice, core support services). Peer review of a scientific program may address 1) single or multiple activities, 2) a portfolio of organizational units or cross-cutting topics that relate to a unit’s work, or 3) multiple organizational units at CDC.

Appendix: CDC/ATSDR PEER REVIEW AGENDA

The webpage below provides information on the independent peer review of documents defined by CDC as influential in terms of their potential impact on public policy or the private sector. CDC makes this information available to demonstrate its efforts to utilize only the most transparent and independent peer review, appropriate research methods, and the highest level of data quality.
