Talk to your partner about any recent illness and be aware of new or unexplained rash on your body or your partner’s body, including the genitals and anus. If you or your partner have recently been sick, currently feel sick, or have a new or an unexplained rash, do not have sex and see a healthcare provider.

If you or a partner has monkeypox, the best way to protect yourself and others is to avoid sex of any kind (oral, anal, vaginal) and do not kiss or touch each other’s bodies while you are sick, especially any rash. Do not share things like towels, fetish gear, sex toys, and toothbrushes.

If you or your partner have (or think you might have) monkeypox and you decide to have sex, consider the following to reduce the chance of spreading the virus:

- Have virtual sex with no in-person contact.
- Masturbate together at a distance of at least 6 feet, without touching each other and without touching any rash.
- Consider having sex with your clothes on or covering areas where rash is present, reducing as much skin-to-skin contact as possible. If the rash is confined to the genitals or anus, condoms may help; however, condoms alone are likely not enough to prevent monkeypox.
- Avoid kissing.
- Remember to wash your hands, fetish gear, sex toys and any fabrics (bedding, towels, clothing) after having sex.
- Having multiple or anonymous sex partners may increase your chances of exposure to monkeypox. Limiting your number of sex partners may reduce the possibility of exposure.
- Avoid touching the rash. Touching the rash can spread it to other parts of the body and may delay healing.

What should a person do if they have a new or unexplained rash or other symptoms?

- Avoid sex or being intimate with anyone until you have been checked out by a healthcare provider.
- If you don’t have a provider or health insurance, visit a public health clinic near you.
- When you see a healthcare provider, wear a mask, and remind them that this virus is circulating in the area.
- Avoid gatherings, especially if they involve close, personal, skin-to-skin contact.
- Think about the people you have had close, personal, or sexual contact during the last 21 days, including people you met through dating apps. To help stop the spread, you might be asked to share this information if you have received a monkeypox diagnosis.
