US CENTERS FOR DISEASE CONTROL AND PREVENTION

Airline Pre-arrival Script for COVID-19 Screening

Before landing, cabin crew should read the following script to passengers and distribute Traveler Health Declaration Forms. Each passenger should get a separate form, including children.

Welcome to the United States.

Because you were in a country with a widespread ongoing transmission of coronavirus disease, or COVID-19, you will need to complete a health form as part of the US health screening process. We will distribute the health form now.

Each passenger needs to complete a separate form and parents should complete a form for each child.

Keep the form and hand it to federal authorities as directed after you disembark.

After disembarking the flight, you will get a card or flyer detailing how to check your temperature and health status for the next 14 days. You will be asked to stay home during this time. You may also receive additional health screening.

Thank you for your cooperation, which is essential in US efforts to slow the spread of COVID-19.
