Comprehensive Sexual Health Care for Sexual and Gender Minority Patients in the HAART and PrEP Era 
by Kenneth Mayer, MD

Sexual and gender minority patients have experienced sexual health disparities that are partially related to behaviors (e.g. frequent partner change among some subgroups), biology (e.g. increased susceptibility of the rectal mucosa to HIV and several other STIs), and structural factors (e.g. lack of culturally competent care, unsupportive socio-political environments). The advent of highly active antiretroviral therapy (HAART) and pre-exposure prophylaxis (PrEP) means that individuals can engage in condomless sex without HIV transmission. The implications of the new findings in HIV prevention for STI management and control will be explored in the talk, with suggestions for the development of new paradigms to enhance the sexual health of these populations.

Kenneth Mayer, M.D. is the founding Medical Research Director of Fenway Health, where he created a community health research program that has developed an international reputation for its capability to conduct community-based peer reviewed research. He is currently a Professor at Harvard Medical School and Attending Physician and Director of HIV Prevention Research at Beth Israel Deaconess Hospital in Boston. Since 1994, he has been the Principal Investigator of the only NIH-funded HIV Prevention Research Clinical Trials Unit in New England focusing on bio-behavioral prevention research. He is the co-author of more than 600 peer-reviewed publications, co-authored the first text on AIDS for the general public and has co-edited 5 academic texts. He is currently a member of the Governing Council of the International AIDS Society.
