Satellite Session

STI vaccines: Toward global STI prevention and control

Date: Sunday, 8 June 2014

Time: 3:30pm to 5:30pm

Room: Grand Ballroom B (M4)

Innovative new measures are needed to prevent STIs and their often devastating sexual and reproductive health consequences.

In 2013, WHO and NIAID organized a technical consultation on STI vaccines to review and evaluate the need, development status, and future prospects for effective new STI vaccines.

The consultation resulted in a special issue of the journal *Vaccine* devoted to STI vaccine development: <http://www.sciencedirect.com/science/journal/0264410X/32/14>.

This session will explore key findings from the STI vaccine technical consultation.

Moderators: Lauri Markowitz (CDC) and Massimo Ghidinelli (PAHO)

Presentations:

- **Toward global prevention of STIs: The need for STI vaccines.**
Sami Gottlieb (World Health Organization)
- **Current status and prospects for development of an HSV vaccine.**
Christine Johnston (University of Washington)
- **Current status and prospects for development of a chlamydia vaccine.**
Karuna Karunakaran (British Columbia Centre for Disease Control)
- **Vaccines against gonorrhea: Current status and future challenges.**
Ann Jerse (Uniformed Services University of the Health Sciences)
- **Challenges and opportunities for STI vaccine development: The industry perspective.**
Betty Dodet (World Health Organization)
- **The way forward: A global roadmap for progress toward STI vaccine development and introduction.**
Carolyn Deal (National Institute of Allergy and Infectious Diseases)

General discussion on how to accelerate the development of STI vaccines
