What does this mean for your practice?

- **STEADI-Rx** is a pharmacy initiative to reduce the risk of falls in older adults through collaboration between healthcare providers and pharmacists.
- Community pharmacists will screen older adults using the three STEADI questions and review the patient’s profile to identify medications that may increase the risk of falls.
- Collaboration with a community pharmacist can help you meet **quality metrics** related to falls and high-risk medications and improve fall-related outcomes.

How **STEADI-Rx** works:

**STEP 1:**
Patient screened for fall risk at pharmacy

**STEP 2:**
Pharmacist performs medication review

**STEP 3:**
Information shared with patient and provider

**STEP 4:**
Provider responds to recommendation
