Key features of syphilis in the U.S. in 2004

Syphilis is a preventable and curable sexually transmitted disease (STD). Syphilis disproportionately affects a small percentage of the population and research shows that these are often isolated groups involved in high-risk activities such as illicit drug use, exchanging sex for money or drugs, unprotected sexual intercourse and having multiple sex partners.

- U.S. primary and secondary (P&S) syphilis rate in 2004 was 2.7 cases/100,000 population (7,980 cases).
- U.S. congenital syphilis rate was 8.8 cases/100,000 live births (353 cases).
- Half of U.S. P&S cases in 2004 were in 20 counties, less than 1% of 3,140 counties.

Key features of syphilis in East Baton Rouge County, LA in 2004

Primary and secondary syphilis cases, rates and rank

- East Baton Rouge County, LA's 124 cases ranked 14 among 3,140 U.S. counties.
- East Baton Rouge County, LA's rate of 30.1 cases/100,000 population ranked 9 among 3,140 U.S. counties.
- East Baton Rouge County, LA's rate was 11.1 times the U.S. rate of 2.7 cases/100,000 population.

Male-female ratios (primary and secondary syphilis)

- In East Baton Rouge County, LA 76 (61%) cases in 2004 were among males, compared to 83% nationally. The rate among males (38.4/100,000) was 8.2 times that of the U.S. male rate (4.7/100,000).
