WCDC Health Information Innovation Consortium

To improve surveillance and advance our mission, CDC created a forum for innovation to stimulate and test new approaches to traditional public health surveillance. The forum, CHIIC, funds select informatics and health information technology (HIT) projects, makes them available as reproducible tools and models, and shares lessons widely. It also helps CDC stay well-informed about current national HIT standards and policies.

Why It Matters

To improve timeliness and accuracy of data collection, we need forums like CHIIC that foster creative solutions to public health challenges. Since 2014, CHIIC projects have driven informatics advances in cancer control, reporting of stroke cases, and tracking antibiotic resistance in foodborne pathogens. Many of the tools from these projects can be reused or extended to other surveillance systems or activities. They are paving the way for greater interoperability within the agency and beyond. CHIIC’s priority areas include:

- Shared services, interoperability, and application programming interfaces (API)
- Collaboration and communication tools and processes
- Data management, analysis, and visualization
- Emerging data and HIT standards
- Privacy and security
- Decision support, algorithms, and machine learning

“...most important about technical innovations and use cases for CDC is that they are enterprise-wide and can be adopted by different programs. Interoperability must start within CDC.”

— Brian Lee, MPH
Chief Public Health Informatics Officer
Office of Public Health Scientific Services, CDC
