

Development of a National Neurological Conditions Surveillance System (NNCSS)

As part of the 21st Century Cures Act, Congress authorized the Centers for Disease Control and Prevention (CDC) to develop a National Neurological Conditions Surveillance System (NNCSS) that provides useful estimates of neurological conditions in the United States. CDC is using existing data sources and emerging sources, methods, and tools to 1) estimate prevalence and explore incidence for multiple sclerosis (MS) and Parkinson's disease (PD), and 2) create efficient, reusable processes and models that can be applied to multiple conditions to provide disease-specific surveillance information.
