

Health Center/Practice Setting Organizational Assessment

Definitions

Adolescents: For the purposes of this assessment, adolescents refers to all youth ages 15-19

Family Planning: Any service related to postponing or preventing pregnancy. Family planning services may include a medical examination related to provision of a method, contraceptive counseling, method prescription or supply visits. A patient may receive a family planning service even if the primary purpose of her visit is not for contraception.

Sexual Health Assessment: Assessment of sexual activity, current and future contraceptive options, sexual partners, condom use and protection from STDs and past STD history.

Standard of Care: A standard of care refers to informal or formal guidelines that are generally accepted in the medical community for treatment of a disease or condition.

Health and Human Service (HHS) Teen Pregnancy Prevention (TPP) Evidence Based Program list: List of programs proven to be effective at preventing teen pregnancies, sexually transmitted infections, or sexual risk behaviors. (http://www.hhs.gov/ash/oah/oah-initiatives/teen_pregnancy/db/index.html)

5	Quick Start insertion of implant offered after negative history* and negative urine pregnancy test (UPT) (e.g., no need to schedule a separate insertion visit).	<input type="checkbox"/>				
6	Provide or prescribe multiple cycles of oral contraceptive pills (up to 12 months), the patch or the ring to minimize the number of times an adolescent has to return to health center.	<input type="checkbox"/>				
7	Provide client with another contraceptive method to use until patient can start the chosen method, if not immediately available on-site, the same day, or client not medically eligible.	<input type="checkbox"/>				
8	Offer same-day contraceptive services to adolescents who have a negative history* and negative pregnancy test and do not want to become pregnant.	<input type="checkbox"/>				
9	Offer all emergency contraception options (copper-IUD, ulipristal acetate pills, and levonorgestrel pills) to adolescents who have had unprotected intercourse in the last five days (after negative history* and negative urine pregnancy test for early pregnancy).	<input type="checkbox"/>				
10	Offer advanced supply of emergency contraceptive pills (levonorgestrel, ulipristal acetate) to adolescents using Tier 2** (moderately effective) or Tier 3*** (least effective) methods.	<input type="checkbox"/>				
11	For sexually active teens, conduct STI screening annually, or provide diagnostic testing based on sexual history of symptoms.	<input type="checkbox"/>				
12	For sexually active teens, offer HIV screening annually, or provide diagnostic testing based on sexual history of symptoms.	<input type="checkbox"/>				

*A detailed history provides the most accurate assessment of pregnancy risk in a woman who is about to start using a contraceptive method. A health-care provider can be reasonably certain that a woman is not pregnant if she has no symptoms or signs of pregnancy and meets any one of the following criteria:

- is ≤7 days after the start of normal menses
- has not had sexual intercourse since the start of last normal menses
- has been correctly and consistently using a reliable method of contraception
- is ≤7 days after spontaneous or induced abortion
- is within 4 weeks postpartum
- is fully or nearly fully breastfeeding (exclusively breastfeeding or the vast majority [≥85%] of feeds are breastfeeds, amenorrheic and <6 months postpartum)

**Tier 2 (Moderately Effective) includes the following methods: Injectable, pill, patch, ring and diaphragm.

***Tier 3 (Least Effective) includes the following methods: male and female condoms, withdrawal, fertility awareness-based methods, spermicide, and sponge.

16. Indicate if your practice provides the following services or resources by checking the appropriate box.
