

Advisory Committee on Immunization Practices (ACIP)

Summary Report October 25-26, 2017 Atlanta, Georgia

Addendum: Japanese Encephalitis Vaccine Session

During the discussion period for the Japanese Encephalitis Vaccine Session, Dr. John Allen from Valneva added to the responses made to a question from ACIP member Dr. Lee who inquired as to whether the DoD database includes spouses, children, and associated members in the military. The minutes contained a typographical error stating 2% rather than 10% as Dr. Allen reported onsite. The following reflects the language in the approved/published minutes, the verbatim statement made by Dr. Allen onsite, and a clarifying statement submitted by Dr. Allen post-meeting:

As documented and published:

John Allen (Valneva) indicated that unpublished data from a study from the DoD in 2015 showed that 2% of the Air Force dependents are currently receiving JE-VC.

Verbatim from audio onsite:

Yes, this is John Allen, Valneva. There is unpublished data, a study from the Department of Defense in 2015, that 10% of the Air Force Dependents that live in Asia are currently receiving JE-VC.

Post-Meeting clarification submitted by Dr. Allen:

I went to the microphone and commented that 2015 unpublished data from the Air Force estimated 9% of the children received the full 2 dose regimen for JE vaccination. Unfortunately, the minutes reflect that I commented 2% of the Air Force pediatric population living in Asia were vaccinated. Please ask the responsible person to make this correction.
