2015-16 US Influenza Vaccine Supply

- Manufacturers have estimated that as many as 171-179M doses of influenza vaccine will be available this season, depending on yield, lot release, and demand for product
 - Last season, 147.8M doses were distributed
 - The highest number of doses distributed in a single season is 155.1M (2010-11 season)
- Distribution began in August and is anticipated to continue throughout December
- As of October 9, 109.4M doses have been distributed, which is similar to this time last year

Distribution Delays for Specific Vaccines

MedImmune

- All doses originally pre-booked will be produced to fill orders
- Distribution of FluMist® Quadrivalent began in September and will continue throughout December
- Partial shipments are being used to distribute vaccine

Sanofi Pasteur

- All doses originally pre-booked will be filled
- Distribution of Fluzone® in unit dose vials, multi-dose vials, and Intradermal Fluzone® is complete
 - Multi-dose vials and intradermal vaccine supply remain available for immediate shipment
- Distribution of pre-booked Fluzone® in prefilled syringes (including 0.25mL syringes) is ongoing and will complete by the end of November
- For older adults, Fluzone High-Dose® Vaccine will be complete in early November
- Partial shipments are being used to distribute vaccine
