CVD-103 HgR vaccine (Vaxchora)

FDA approves vaccine to prevent cholera for travelers

For Immediate Release

June 10, 2016

Release

The U.S. Food and Drug Administration today approved Vaxchora, a vaccine for the prevention of cholera caused by serogroup O1 in adults 18 through 64 years of age traveling to cholera-affected areas. Vaxchora is the only FDA-approved vaccine for the prevention of cholera.

ACIP Cholera Vaccine Work Group activities since February 2016

- Summarized additional data
 - Special populations: pregnant women, breastfeeding women, immunocompromised people, children
 - Shedding and transmission of vaccine strain
 - Duration of protection
- Developed proposed recommendation

Today's session

- Summary of additional data
- Overview of vaccine approval and package insert
- Presentation of proposed recommendation
- Discussion and vote
