Thrombocytopenic thrombosis after Janssen vaccine: Work Group Interpretation

Sara Oliver MD, MSPH
ACIP Meeting
April 14, 2021
Discussion by the Work Group

- Benefit/risk balance for use of the Janssen COVID-19 vaccine
- Review of cerebral venous sinus thrombosis (CVST) cases
- Risk of COVID-19 disease, by sex and age
- COVID-19 vaccines administered, by age
- Janssen vaccine doses administered to date
- Projected supply of COVID-19 vaccines in the US
- Policy options for updated recommendations for use for Janssen COVID-19 vaccine
CVST cases reviewed by the Work Group

- 6 cases of CVST reported to VAERS
  - All 6 among women 18-48 years of age
  - Interval from vaccine receipt to symptom onset ranged from 6-13 days

- 1 case of CVST reported in the Phase 3 clinical trial
  - 25 year old male, no previous medical history, no medications
  - Day 9 after vaccination: fever, headache
  - Day 19 after vaccination: seizure, CT with cerebral hemorrhage
  - Day 21 after vaccination: CVST diagnosed, anti-PF4 positive

CVST: Cerebral Venous Sinus Thrombosis
COVID-19 Cases and Deaths by Sex

COVID-19 Cases by Sex,
January 22, 2020 – April 12, 2021

COVID-19 Deaths by Sex,
January 22, 2020 – April 12, 2021

*Data from 24,349,551 cases, sex was available for 24,071,425
https://covid.cdc.gov/covid-data-tracker/#demographics

*Data from 433,171 deaths, sex was available for 432,059

Janssen Doses Administered to Date

Thrombocytopenic thrombotic events develop ~6-13 days after vaccine receipt

7,233,726 doses administered in the United States

**Prior to March 30:**
3,466,166 Janssen doses administered
48% of doses

Thrombocytopenic thrombotic events post-vaccine likely already occurred

**March 30 to April 13**
3,767,560 Janssen doses administered
52% of doses

Thrombocytopenic thrombotic events post-vaccine may still occur

Source: CDC Immunization Data Lake; Includes data reported to CDC as of 4/13/2021 at 6:00 am

*Data stratified by age and sex does not include Texas.*
COVID-19 vaccine Supply Considerations

mRNA vaccines
- Expect ~14 million first doses of Pfizer and Moderna vaccines each week

Janssen vaccines
- To date, Janssen COVID-19 vaccine comprises <5% of the vaccines administered
- Approximately 13 million doses of Janssen vaccines available
  - Estimated 3.6M doses available to order
  - Estimated 9.2M doses currently available at administration sites

- While doses for the Janssen vaccine may be less than mRNA vaccines, Janssen vaccine has been used in populations that may be difficult to reach with mRNA vaccines that require freezer temperatures or two doses

[13]

Thrombocytopenic thrombotic events after the AstraZeneca vaccine have occurred in the US. Six cases of CVST reported after receipt of the Janssen COVID-19 vaccine. No cases of CVST with thrombocytopenia reported after receipt of either Pfizer and Moderna COVID-19 vaccines. CVST cases have occurred primarily in younger adults, females. CVST can be clinically devastating or fatal. In the US, alternative COVID-19 vaccines (mRNA vaccines) are available. Based on current projections, supply of both mRNA vaccines fairly stable for near future.
What we do NOT know

- True background incidence of CVST with thrombocytopenia
- Specific risk factors for thrombocytopenic thrombotic events
- Incidence of other thrombotic (non-CVST) cases with thrombocytopenia after Janssen vaccine
- Ability to compare or generalize thrombotic cases after the AstraZeneca vaccine to Janssen vaccine
- True incidence of thrombocytopenic thrombotic events/CVST after a Janssen/J&J COVID-19 vaccine
  - More cases may be identified in the coming days/weeks
Policy options:
Janssen/J&J COVID-19 vaccine
Policy options: Janssen/J&J COVID-19 vaccines

WG Discussion points

- While overall reported cases are rare, once limited to doses administered to age and sex of CVST cases seen, observed cases exceed expected cases

- Given the timing of doses administered (52% of doses administered in the previous 2 weeks), additional cases may be identified over the next 1-2 weeks

- Emphasis that robust safety surveillance is critical
  - Signal detection and evaluation of cases occurred as planned
Policy Options for Janssen Policy Recommendations

Do **not** recommend use of Janssen vaccine

Recommend use of Janssen/J&J COVID-19 vaccine in **all adults ≥18 years of age**
Policy Options for Janssen Policy Recommendations

- **Do not** recommend use of Janssen vaccine
- Recommend use of Janssen/J&J COVID-19 vaccine in **all adults** ≥18 years of age
- Recommend use of Janssen/J&J COVID-19 vaccine in **some** populations
  - Adults **50 years of age** and older only
  - **Males** only

**Age or gender specific populations?**
Policy options: Janssen/J&J COVID-19 vaccines

WG Discussion points

- Sex/gender-based recommendations:
  - Difficult to implement

- Age-based recommendations:
  - Concern that we may not have sufficient data at this time to inform specific age cut-off
  - Acknowledge that many countries in Europe have used age-based approach for the AstraZeneca vaccine recommendations
  - Allow for additional options (mRNA or Ad-vector) in an older, at-risk population
Extending pause while awaiting additional information:
- Potentially allow for more informed, specific recommendations for the use of the Janssen vaccine
  - Evaluate risk by age, inform possible age-based recommendation
  - Assess if thrombocytopenic thrombosis risk beyond CVST cases
- Could have broad consequences:
  - Individuals may want to receive Janssen vaccine
  - Pause could have global implications (pausing clinical trials, availability of Janssen vaccine in other countries with more limited supply)
Previous Janssen vote:

| The Janssen COVID-19 vaccine is recommended for persons 18 years of age and older in the U.S. population under the FDA’s Emergency Use Authorization |

Questions for ACIP to discuss:

- Does ACIP have enough information to make **interim** age or risk-factor based recommendations for use of the Janssen vaccine?
- What recommendation does ACIP feel is appropriate **today** given current available information for use of the Janssen vaccine?
Thank you
