Basics

- Store vaccine in a freezer or refrigerator. See guidance below for each storage unit.
- Each box contains 10 multidose vials. Vaccine is supplied in two presentations:
  - Maximum of 11 doses per vial
  - Maximum of 15 doses per vial
- Each box is approximately 2 inches by 2 inches by 5.4 inches

Deliveries

Vaccine

1. The vaccine will arrive frozen between -50°C and -15°C (-58°F and 5°F).
2. Examine the shipment for signs of damage.
3. Open the box and remove TagAlert Temperature Monitor from box (placed in the inner box next to vaccine).
4. Check the TagAlert temperature monitoring device by pressing the blue “start and stop” button.
   - Left arrow points to a green checkmark: The vaccine is ready to use. Store the vaccine at proper temperatures immediately.
   - Right arrow points to a red X: The numbers 1 and/or 2 will appear in the display. Store the vaccine at proper temperatures and label DO NOT USE! Call the phone number indicated in the instructions or your jurisdiction’s immunization program IMMEDIATELY!
5. The expiration date is NOT printed on the vaccine vial or carton. To determine the expiration date:
   - Scan the QR code located on the outer carton, or
   - Go to www.modernatx.com/covid19vaccine-eua/.

Ancillary Supply Kit

An ancillary kit with supplies will be provided for administering the vaccine. It includes enough supplies to administer 100 doses of vaccine (10 doses per vial).

Administration supplies include needles, syringes, sterile alcohol prep pads, vaccination record cards (shot cards), and some PPE.

The kit is delivered separately from the vaccine. Unpack the kit and check for receipt of the correct administration supplies and quantities.

Freezer

Unpunctured vials may be stored in the freezer between -50°C and -15°C (-58°F and 5°F).

- Store in the original carton.
- Protect from light.
- Do not store with dry ice or below -50°C (-58°F).
Storage unit temperatures must be monitored regularly and checked and recorded at the beginning of each workday to determine if any excursions have occurred since the last temperature check. For accurate temperature monitoring, use a digital data logger (DDL) with a detachable probe that best reflects vaccine temperatures (e.g., probe buffered with glycol, glass beads, sand, or Teflon®). Check and record the temperature daily using a temperature log and one of the options below:

**Option 1: Minimum/Maximum Temperatures (preferred)**
Most DDLs display minimum and maximum (min/max) temperatures. Check and record the min/max temperatures at the start of each workday.

**Option 2: Current Temperature**
If the DDL does not display min/max temperatures, check and record the current temperature at the start and end of the workday. Review the continuous DDL temperature data daily.

For CDC temperatures logs, see [https://www.cdc.gov/vaccines/covid-19/info-by-product/moderna/index.html](https://www.cdc.gov/vaccines/covid-19/info-by-product/moderna/index.html).

**Transporting Vaccine**
Modernac COVID-19 vaccine may be transported at frozen and refrigerated temperatures using a portable unit or container qualified to maintain appropriate temperatures. Detailed guidance can be found in CDC’s Storage and Handling Toolkit COVID-19 addendum and Transporting Vaccine for Vaccination Clinics Held at Satellite, Temporary, or Off-Site Locations.

**Disposal**
Once vaccine has reached its expiration or beyond-use date, contact the manufacturer for guidance on whether it can still be used. If instructed to dispose of vaccine, dispose of the vial (with any remaining vaccine) and packaging as medical waste according to your local and state regulations. Contact your jurisdiction’s immunization program for guidance ([https://www.cdc.gov/vaccines/imz-managers/awardee-imz-websites.html](https://www.cdc.gov/vaccines/imz-managers/awardee-imz-websites.html)).

*Unpunctured vials may be stored between 8° to 25°C (36° to 77°F) for a total of 24 hours.*

For additional information, refer to the manufacturer’s product information at [https://www.modernatx.com/covid19vaccine-eua/](https://www.modernatx.com/covid19vaccine-eua/).

CDC’s Vaccine Storage and Handling Toolkit [https://www.cdc.gov/vaccines/hcp/admin/storage/toolkit/storage-handling-toolkit.pdf](https://www.cdc.gov/vaccines/hcp/admin/storage/toolkit/storage-handling-toolkit.pdf)

Unpunctured vials may be stored in the refrigerator between 2° to 8°C (36° to 46°F) for up to 30 days.*

- Do NOT refreeze thawed vaccine.
- Thawed vaccine can be handled in room light.
- Monitor how long the vaccine has been in the refrigerator using CDC’s beyond-use date labels.
  - Remove the box from frozen storage.
  - Complete the information on the storage label.
  - Attach it to the box holding the vaccine vials.
  - Once labeled, place vaccine in the refrigerator.

**Punctured vials** may be stored between 2°F and 25°C (36°F and 77°F) for up to 12 hours.

**Temperature Monitoring**
Storage unit temperatures must be monitored regularly and checked and recorded at the beginning of each workday to determine if any excursions have occurred since the last temperature check. For accurate temperature monitoring, use a digital data logger (DDL) with a detachable probe that best reflects vaccine temperatures (e.g., probe buffered with glycol, glass beads, sand, or Teflon®). Check and record the temperature daily using a temperature log and one of the options below:

  - Most DDLs display minimum and maximum (min/max) temperatures. Check and record the min/max temperatures at the start of each workday.

- **Option 2: Current Temperature**
  - If the DDL does not display min/max temperatures, check and record the current temperature at the start and end of the workday. Review the continuous DDL temperature data daily.

 CDC’s Moderna COVID-19 Vaccine[store vaccine between 2°C and 8°C (36°F and 46°F) for up to 30 days.]

- **Lot number(s):** 123456A
- **Today’s date:** 4/10/2021
- **USE BY**: 5/10/2021

*After this date/time, do NOT use. Contact the manufacturer for guidance. If directed to discard the vaccine, follow the manufacturer’s and your jurisdiction’s guidance on proper disposal.

**Vaccine may be transported for 12 cumulative hours.**

- **Transport date:** 4/5/21
- **Time in transport:** 2 hrs
- **Time remaining:** 10 hrs

**Name:** Amy Nurse RN

 CDC’s Moderna COVID-19 Vaccine Storage and Handling Summary

- **Refrigerator**
  - Unpunctured vials may be stored in the refrigerator between 2° to 8°C (36° to 46°F) for up to 30 days.*
    - Do NOT refreeze thawed vaccine.
    - Thawed vaccine can be handled in room light.
    - Monitor how long the vaccine has been in the refrigerator using CDC’s beyond-use date labels.
      - Remove the box from frozen storage.
      - Complete the information on the storage label.
      - Attach it to the box holding the vaccine vials.
      - Once labeled, place vaccine in the refrigerator.

- **Punctured vials** may be stored between 2°F and 25°C (36°F and 77°F) for up to 12 hours.

- **Temperature Monitoring**
  - Storage unit temperatures must be monitored regularly and checked and recorded at the beginning of each workday to determine if any excursions have occurred since the last temperature check. For accurate temperature monitoring, use a digital data logger (DDL) with a detachable probe that best reflects vaccine temperatures (e.g., probe buffered with glycol, glass beads, sand, or Teflon®). Check and record the temperature daily using a temperature log and one of the options below:

- **Option 1: Minimum/Maximum Temperatures (preferred)**
  - Most DDLs display minimum and maximum (min/max) temperatures. Check and record the min/max temperatures at the start of each workday.

- **Option 2: Current Temperature**
  - If the DDL does not display min/max temperatures, check and record the current temperature at the start and end of the workday. Review the continuous DDL temperature data daily.
