Before mixing, COVID-19 vaccine (Pfizer) may be stored in the refrigerator between 2°C and 8°C (36°F and 46°F) for up to 120 hours (5 days).

1. Place vaccine vials removed from frozen storage at the same time together in a resealable plastic bag or similar container.

2. Complete the information on the storage label and attach it to the container holding the unmixed vaccine vials.

3. Once labeled, store unmixed vaccine vials upright in the refrigerator between 2°C and 8°C (36°F and 46°F).

Note: Storage labels on page 2 are formatted to print on 4" x 3-1/3" adhesive labels. We are unable to format for other size labels. If this size label is not available, print on paper and tape to container holding the vaccine.

REMEMBER!
Use vaccine vials stored in the refrigerator before removing additional vials from the freezer.

For additional information, see the vaccine manufacturer’s product information at www.cvdvaccine.com
Before mixing, the vaccine may be stored in the refrigerator between 2°C and 8°C (36°F and 46°F) for up to 120 hours (5 days).
