

Pfizer-BioNTech COVID-19 Vaccine

Temperature Log for Ultra-Cold Vaccine Storage (Celsius) Days 1-15

Store COVID-19 vaccine (Pfizer) between -90°C and -60°C. Using a digital data logger (DDL), check and record the temperature daily using one of the options below. Save this record for 3 years, unless your state/local jurisdiction requires a longer time period. See CDC's Vaccine Storage and Handling Toolkit, COVID-19 Addendum, for additional information.

Option 1: Minimum/Maximum (Min/ Max) Temperatures (preferred)

- 1. Most DDLs display minimum and maximum temperatures. Check and record the min/max temperatures at the start of each workday.
- 2. Document these temperatures in the min/max temperature row under the appropriate date.

Option 2: Current Temperature

- 1. If the DDL does not display min/max temperatures, check and record the current temperature at the start and end of the workday.
- 2. Document these temperatures by writing an "X" in the row that corresponds to the freezer temperature under the appropriate day of the month.
- 3. Review the continuous DDL temperature data daily.

If the temperature is out of range, **TAKE ACTION!**

- 1. Do **NOT** discard the vaccine.
- 2. Label the vaccine "Do Not Use."
- 3. Complete the Vaccine Troubleshooting Record.
- 4. Contact the manufacturer to determine under what conditions (frozen or refrigerated) to store the vaccine as quickly as possible.
