Shaded boxes indicate the vaccine can be given during shown age range.

---

1 The second dose of HepB may be given either at the 1 month or 2 month visit.
2 Two doses given at least four weeks apart are recommended for children aged 6 months through 8 years of age who are getting a flu vaccine for the first time and for some other children in this age group.

If your child has any medical conditions that put him at risk for infections or is traveling outside the United States, talk to your child’s doctor about additional vaccines that he may need.

</table>

---

### Milestones*<sup>5</sup>

- Cries when mom or dad leaves
- Says “mama” and “dada”
- Copies gestures (for example, waves “bye bye”)
- May stand alone
- Looks at right picture or thing when named
- Imitates what you are doing
- Drinks from a cup
- Scrubs on his own
- Walks well
- Says a couple of words other than “mama” and “dada”
- Points to show others something interesting
- Says several single words
- Points to one body part
- Plays mainly beside other children
- Plays simple make-believe games
- Throws ball overhand
- Can name most familiar things
- Shows affection for friends without prompting
- Turns book pages one at a time
- Kicks a ball
- Speaks very clearly
- Tells stories
- Can print some letters or numbers
- Hops; may be able to skip
- Enjoy playing with other children
- Points to show others something interesting
- Turns book pages one at a time
- Kicks a ball
- Speaks very clearly
- Tells stories
- Can print some letters or numbers
- Hops; may be able to skip
- Enjoy playing with other children

For more information, call toll free 1-800-CDC-INFO (1-800-232-4636) or visit www.cdc.gov/vaccines/schedules/easy-to-read/child.html (Immunization) or www.cdc.gov/milestones (Milestones)

---

<sup>1</sup> Two doses given at least four weeks apart are recommended for children aged 6 months through 8 years of age who are getting a flu vaccine for the first time and for some other children in this age group.

<sup>2</sup> Two doses of HepA vaccine are needed for lasting protection. The first dose of HepA vaccine should be given between 12 months and 23 months of age. The second dose should be given 6 to 18 months later. HepA vaccination may be given to any child 12 months and older to protect against HepA. Children and adolescents who did not receive the HepA vaccine and are at high-risk should be vaccinated against HepA.

<sup>3</sup> Two doses of HepA vaccine are needed for lasting protection. The first dose of HepA vaccine should be given between 12 months and 23 months of age. The second dose should be given 6 to 18 months later. HepA vaccination may be given to any child 12 months and older to protect against HepA. Children and adolescents who did not receive the HepA vaccine and are at high-risk should be vaccinated against HepA.

This is not an exhaustive list of milestones from 0–6 years. See more at www.cdc.gov/milestones

If your child has any medical conditions that put him at risk for infections or is traveling outside the United States, talk to your child’s doctor about additional vaccines that he may need.
