

Why do pediatricians think that vaccines are so important?

@JeanMoorjani: I vaccinate to protect babies that are too young to get certain vaccines. They depend on vaccinated kids and adults. #WhyIVax #ivax2protect

@DrStager: I watched a nine-month-old baby cough and cough until she turned purple and desperately gasped for air due to whooping cough infection. #ivax2protect

@StephRStarr: #ivax2protect infants from rotavirus illness requiring hospitalization - I have admitted zero since we started vax @AmerAcadPeds @MNHealth

@NancyGraffMD: I've seen kids die from vaccine preventable illnesses. That's why #ivax2protect #vaccineswork #AAPLegCon

@pmlndr: Because I love babies #WhyIVax #ivax2protect

@dmarie208: As a critical care pediatrician, I've seen kids die from vaccine preventable diseases. That's why #ivax2protect #AAPLegCon @AmerAcadPeds

@freckledpedidoc: Took care of child with Hib meningitis, survived with complications: hearing loss, electrolyte imbalance, decreased tone, etc #ivax2protect.

@RThienprayoon: #ivax2protect my baby and all immunocompromised kids who can't vaccinate!

@freckledpedidoc: #ivax2protect babies and kids with poor immune systems so that the entire community is safe from Hib, whooping cough, measles, chicken pox!

@DrAparnaBole: #ivax2protect my children, my patients, my neighbors, my community. It takes a village! #WhyIVax #VaccinesWork.
