

# CoCASA Changes from Version 10.0.9 to 11

---

## AFIX Enhancements

1. **Added the CVX codes for the 9-valent HPV vaccines**  
CoCASA will now recognize the 9-valent vaccines for assessment purposes.
2. **Estimated number of patients in the designated assessment cohort**  
Updated the title in the tab header from “Estimated number of patients in the designated assessment cohort” to “Patient Count”. This header displays the number of patients entered into CoCASA for assessment.
3. **Included the word “Database” in association with CoCASA & DB versions on the application’s main screen**  
The use of “DB” was confusing to users; therefore the word “Database” has been added to the version titles.
