**Combination vaccines (use combination vaccines instead of separate injections when appropriate)**

| DTaP, hepatitis B, and inactivated poliovirus vaccine | DTap-HepB-IPV | Pediartix® |
| DTaP, inactivated poliovirus, and *Haemophilus influenzae* type b vaccine | DTap-IPV/Hib | Pentacel®/Kintrix®/Quadracel® |
| DTaP and inactivated poliovirus vaccine | DTap-IPV | Vaxcel®/ProQuad® |

*Administer recommended vaccines if immunization history is incomplete or unknown. Do not restart or add doses to vaccine series for extended intervals between doses. When a vaccine is not administered at the recommended age, administer at a subsequent visit. Use of trade names is for identification purposes only and does not imply endorsement by the ACIP or CDC.*

**How to use the child and adolescent immunization schedule**

1. Determine recommended vaccine by age (Table 1)
2. Determine recommended interval for catch-up vaccination (Table 2)
3. Assess need for additional recommended vaccines by medical condition or other indication (Table 3)
4. Review vaccine types, frequencies, intervals, and considerations for special situations (Notes)
5. Review contraindications and precautions for vaccine types (Appendix)
6. Review new or updated ACIP (Addendum)

**Report**

- Suspected cases of reportable vaccine-preventable diseases or outbreaks to your state or local health department
- Clinically significant adverse events to the Vaccine Adverse Event Reporting System (VAERS) at www.vaers.hhs.gov or 800-822-7967

**Questions or comments**

Contact [www.cdc.gov/cdc-info](http://www.cdc.gov/cdc-info) or [800-CDC-INFO (800-232-4636)](http://800-CDC-INFO (800-232-4636)), in English or Spanish, 8 a.m.–8 p.m. ET, Monday through Friday, excluding holidays.

</tbody>
</table>

These recommendations must be read with the notes that follow. For those who fall behind or start late, provide catch-up vaccination at the earliest opportunity as indicated by the green bars.

To determine minimum intervals between doses, see the catch-up schedule (Table 2).
The table below provides catch-up schedules and minimum intervals between doses for children whose vaccinations have been delayed. A vaccine series does not need to be restarted, regardless of the time that has elapsed between doses. Use the section appropriate for the child’s age. Always use this table in conjunction with Table 1 and the Notes that follow.

**a.** For additional information regarding HIV laboratory parameters and use of live vaccines, see the General Best Practice Guidelines for Immunization, “Altered Immunocompetence” at [www.cdc.gov/vaccines/hcp/acip-recs/general-recs/immunocompetence.html](http://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/immunocompetence.html) and Table 4-1 (footnote J) at [www.cdc.gov/vaccines/hcp/acip-recs/general-recs/contraindications.html](http://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/contraindications.html).

**b.** Severe Combined Immunodeficiency

**c.** LAIV4 contraindicated for children 2–4 years of age with asthma or wheezing during the preceding 12 months.
For vaccination recommendations for persons ages 19 years or older, see the Recommended Adult Immunization Schedule, 2024.

**Additional information**

- For calculating intervals between doses, 4 weeks = 28 days. Intervals of ≥4 months are determined by calendar months.
- Within a number range (e.g., 12–18), a dash (–) should be read as “through.”
- Vaccine doses administered ≤4 days before the minimum age or interval are considered valid. Doses of any vaccine administered ≥5 days earlier than the minimum age or minimum interval should not be counted as valid and should be repeated as age appropriate. The repeat dose should be spaced after the invalid dose by the recommended minimum interval. For further details, see Table 3-2, Recommended and minimum ages and intervals between vaccine doses, in General Best Practice Guidelines for Immunization at www.cdc.gov/vaccines/hcp/acip-recs/general-recs/timing.html.
- Information on travel vaccination requirements and recommendations is available at www.cdc.gov/travel/.
- For information about vaccination in the setting of a vaccine-preventable disease outbreak, contact your state or local health department.
- The National Vaccine Injury Compensation Program (VICP) is a no-fault alternative to the traditional legal system for resolving vaccine injury claims. All vaccines included in the child and adolescent vaccine schedule are covered by VICP except dengue, PPSV23, RSV, Mpox and COVID-19 vaccines. Mpox and COVID-19 vaccines are covered by the Countermeasures Injury Compensation Program (CICP). For more information, see www.hrsa.gov/vaccinecompensation or www.hrsa.gov/cicp.

**COVID-19 vaccination**

(minimum age: 6 months [Moderna and Pfizer-BioNTech COVID-19 vaccines], 12 years [Novavax COVID-19 Vaccine])

### Routine vaccination

#### Age 6 months–4 years

- **Unvaccinated:**
  - 2-dose series of updated (2023–2024 Formula) Moderna at 0, 4-8 weeks
  - 3-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 3-8, 11-16 weeks
- **Previously vaccinated** with 1 dose of any Moderna:
  - 1 dose of updated (2023–2024 Formula) Moderna at least 8 weeks after the most recent dose.
- **Previously vaccinated** with 2 or more doses of any Moderna:
  - 1 dose of updated (2023–2024 Formula) Moderna at least 8 weeks after the most recent dose.
- **Previously vaccinated** with 1 dose of any Pfizer-BioNTech:
  - 2-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 8 weeks (minimum interval between previous Pfizer-BioNTech and dose 1: 3-8 weeks).
- **Previously vaccinated** with 2 or more doses of any Pfizer-BioNTech:
  - 1 dose of updated (2023–2024 Formula) Pfizer-BioNTech at least 8 weeks after the most recent dose.

#### Age 5–11 years

- **Unvaccinated:**
  - 1 dose of updated (2023–2024 Formula) Moderna or Pfizer-BioNTech vaccine.
- **Previously vaccinated** with 1 or more doses of Moderna or Pfizer-BioNTech:
  - 1 dose of updated (2023–2024 Formula) Moderna or Pfizer-BioNTech at least 8 weeks after the most recent dose.

#### Age 12–18 years

- **Unvaccinated:**
  - 1 dose of updated (2023–2024 Formula) Moderna or Pfizer-BioNTech vaccine
  - 2-dose series of updated (2023–2024 Formula) Novavax at 0, 3-8 weeks
- **Previously vaccinated** with any COVID-19 vaccine(s):
  - 1 dose of any updated (2023–2024 Formula) COVID-19 vaccine at least 8 weeks after the most recent dose.

### Special situations

Persons who are moderately or severely immunocompromised**

#### Age 6 months–4 years

- **Unvaccinated:**
  - 3-dose series of updated (2023–2024 Formula) Moderna at 0, 4, 8 weeks
  - 3-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 3, 11 weeks.
- **Previously vaccinated** with 1 dose of any Moderna:
  - 2-dose series of updated (2023–2024 Formula) Moderna at 0, 4 weeks (minimum interval between previous Moderna and dose 1: 4 weeks).
- **Previously vaccinated** with 2 doses of any Moderna:
  - 1 dose of updated (2023–2024 Formula) Moderna at least 4 weeks after the most recent dose.
- **Previously vaccinated** with 3 or more doses of Moderna:
  - 1 dose of updated (2023–2024 Formula) Moderna at least 8 weeks after the most recent dose.
- **Previously vaccinated** with 1 dose of any Pfizer-BioNTech:
  - 2-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 8 weeks (minimum interval between previous Pfizer-BioNTech and dose 1: 3 weeks).
- **Previously vaccinated** with 2 or more doses of any Pfizer-BioNTech:
  - 1 dose of updated (2023–2024 Formula) Pfizer-BioNTech at least 8 weeks after the most recent dose.

#### Age 5–11 years

- **Unvaccinated:**
  - 3-dose series of updated (2023–2024 Formula) Moderna at 0, 4, 8 weeks
  - 3-dose series updated (2023–2024 Formula) Pfizer-BioNTech at 0, 3, 7 weeks.
- **Previously vaccinated** with 1 dose of any Moderna:
  - 2-dose series of updated (2023–2024 Formula) Moderna at 0, 4 weeks (minimum interval between previous Moderna and dose 1: 4 weeks).
- **Previously vaccinated** with 2 doses of any Moderna:
  - 1 dose of updated (2023–2024 Formula) Moderna at least 4 weeks after the most recent dose.
- **Previously vaccinated** with 1 dose of any Pfizer-BioNTech:
  - 2-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 4 weeks (minimum interval between previous Pfizer-BioNTech and dose 1: 3 weeks).
- **Previously vaccinated** with 2 doses of any Pfizer-BioNTech:
  - 1 dose of 2023–2024 Pfizer-BioNTech at 0, 3, 11 weeks.
Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

- **Previously vaccinated* with 3 or more doses of any Moderna or Pfizer-BioNTech: 1 dose of updated (2023–2024 Formula) Moderna or Pfizer-BioNTech at least 8 weeks after the most recent dose.

**Age 12–18 years**

- **Unvaccinated:**
  - 3-dose series of updated (2023–2024 Formula) Moderna at 0, 4, 8 weeks
  - 3-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 3, 7 weeks
  - 2-dose series of updated (2023–2024 Formula) Novavax at 0, 3 weeks

- **Previously vaccinated* with 1 dose of any Moderna:**
  2-dose series of updated (2023–2024 Formula) Moderna at 0, 4 weeks (minimum interval between previous Moderna dose and dose 1: 4 weeks).

- **Previously vaccinated* with 2 doses of any Moderna:**
  1 dose of updated (2023–2024 Formula) Moderna at least 4 weeks after the most recent dose.

- **Previously vaccinated* with 1 dose of any Pfizer-BioNTech:**
  2-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 4 weeks (minimum interval between previous Pfizer-BioNTech dose and dose 1: 3 weeks).

- **Previously vaccinated* with 2 doses of any Pfizer-BioNTech:**
  1 dose of updated (2023–2024 Formula) Pfizer-BioNTech at least 4 weeks after the most recent dose.

- **Previously vaccinated* with 3 or more doses of any Moderna or Pfizer-BioNTech:**
  1 dose of any updated (2023–2024 Formula) COVID-19 vaccine at least 8 weeks after the most recent dose.

- **Previously vaccinated* with 1 or more doses of Janssen or Novavax or with or without dose(s) of any Original monovalent or bivalent COVID-19 vaccine:**
  1 dose of any updated (2023–2024 Formula) COVID-19 vaccine at least 8 weeks after the most recent dose.

There is no preferential recommendation for the use of one COVID-19 vaccine over another when more than one recommended age-appropriate vaccine is available.

Administer an age-appropriate COVID-19 vaccine product for each dose. For information about transition from age 4 years to age 5 years or age 11 years to age 12 years during COVID-19 vaccination series, see Tables 1 and 2 at [www.cdc.gov/vaccines/covid-19/clinical-considerations/interim-considerations-us.html#covid-vaccines](https://www.cdc.gov/vaccines/covid-19/clinical-considerations/interim-considerations-us.html#covid-vaccines).

- **Prospectively:** Dose 4 may be administered as early as age 12 months if at least 6 months have elapsed since dose 3.
- **Retrospectively:** A 4th dose that was inadvertently administered as early as age 12 months may be counted if at least 4 months have elapsed since dose 3.

**Catch-up vaccination**

- Dose 5 is not necessary if dose 4 was administered at age 4 years or older and at least 6 months after dose 3.
- For other catch-up guidance, see Table 2.

**Special situations**

- **Wound management** in children less than age 7 years with history of 3 or more doses of tetanus-toxoid-containing vaccine: For all wounds except clean and minor wounds, administer DTaP if more than 5 years since last dose of tetanus-toxoid-containing vaccine. For detailed information, see [www.cdc.gov/mmwr/volumes/67/rr/rr6702a1.htm](https://www.cdc.gov/mmwr/volumes/67/rr/rr6702a1.htm).

**Haemophilus influenzae type b vaccination** (minimum age: 6 weeks)

- **Routine vaccination**
  - ActHIB®, Hiberix®, Pentacel®, or Vaxelis**: 4-dose series (3-dose primary series at age 2, 4, and 6 months, followed by a booster dose* at age 12–15 months)
  - "Vaxelis" is not recommended for use as a booster dose. A different Hib-containing vaccine should be used for the booster dose.
  - PedvaxHIB**: 3-dose series (2-dose primary series at age 2 and 4 months, followed by a booster dose at age 12–15 months)

**Catch-up vaccination**

- **Dose 1** at age 7–11 months: Administer dose 2 at least 4 weeks later and dose 3 (final dose) at age12–15 months or 8 weeks after dose 2 (whichever is later).
- **Dose 1 at age 12–14 months:** Administer dose 2 (final dose) at least 8 weeks after dose 1.
- **Dose 1 before age 12 months and dose 2 before age 15 months:** Administer dose 3 (final dose) at least 8 weeks after dose 2.
- **2 doses of PedvaxHIB** before age 12 months: Administer dose 3 (final dose) at age12–15 months and at least 8 weeks after dose 2.
- **1 dose administered at age 15 months or older:** No further doses needed

**Diphtheria, tetanus, and pertussis (DTaP) vaccination** (minimum age: 6 weeks for Kinrix® or Quadracel®)

**Routine vaccination**

- 5-dose series (3-dose primary series at age 2, 4, and 6 months, followed by a booster doses at ages 15–18 months and 4–6 years)
Notes

Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

- Previously unvaccinated children age 60 months or older who are not considered high risk: Do not require catch-up vaccination

For other catch-up guidance, see Table 2. Vaxelis® can be used for catch-up vaccination in children less than age 5 years. Follow the catch-up schedule even if Vaxelis® is used for one or more doses. For detailed information on use of Vaxelis® see www.cdc.gov/mmwr/volumes/69/wr/mm6905a5.htm.

Special situations

- Chemotherapy or radiation treatment:
  - Unvaccinated or only 1 dose before age 12 months: 2 doses, 8 weeks apart
  - 2 or more doses before age 12 months: 1 dose at least 8 weeks after previous dose

Doses administered within 14 days of starting therapy or during therapy should be repeated at least 3 months after therapy completion.

- Hematopoietic stem cell transplant (HSCT):
  - 3-dose series 4 weeks apart starting 6 to 12 months after successful transplant, regardless of Hib vaccination history

- Anatomic or functional asplenia (including sickle cell disease):
  - Age 12–59 months
    - Unvaccinated or only 1 dose before age 12 months: 2 doses, 8 weeks apart
    - 2 or more doses before age 12 months: 1 dose at least 8 weeks after previous dose
  
Unvaccinated* persons age 5 years or older

- 1 dose

- Elective splenectomy:
  Unvaccinated* persons age 15 months or older

- 1 dose (preferably at least 14 days before procedure)

- HIV infection:
  - Age 12–59 months
    - Unvaccinated or only 1 dose before age 12 months: 2 doses, 8 weeks apart
    - 2 or more doses before age 12 months: 1 dose at least 8 weeks after previous dose
  
Unvaccinated* persons age 5–18 years

- 1 dose

- Immunoglobulin deficiency, early component complement deficiency:
  - Age 12–59 months
    - Unvaccinated or only 1 dose before age 12 months: 2 doses, 8 weeks apart

Hepatitis A vaccination

(minimum age: 12 months for routine vaccination)

Routine vaccination

- 2-dose series (minimum interval: 6 months) at age 12–23 months

Catch-up vaccination

- Unvaccinated persons through age 18 years should complete a 2-dose series (minimum interval: 6 months).
- Persons who previously received 1 dose at age 12 months or older should receive dose 2 at least 6 months after dose 1.
- Adolescents age 18 years or older may receive the combined HepA and HepB vaccine, Twinrix®, as a 3-dose series (0, 1, and 6 months) or 4-dose series (3 doses at 0, 7, and 21–30 days, followed by a booster dose at 12 months).

International travel

- Persons traveling to or working in countries with high or intermediate endemic hepatitis A (www.cdc.gov/travel/):
  - Infants age 6–11 months: 1 dose before departure; revaccinate with 2 doses (separated by at least 6 months) between age 12–23 months.
  - Unvaccinated age 12 months or older: Administer dose 1 as soon as travel is considered.

Hepatitis B vaccination

(minimum age: birth)

Routine vaccination

- 3-dose series at age 0, 1–2, 6–18 months (use monovalent HepB vaccine for doses administered before age 6 weeks)
  - Birth weight ≥2,000 grams: 1 dose within 24 hours of birth if medically stable
  - Birth weight <2,000 grams: 1 dose at chronological age 1 month or hospital discharge (whichever is earlier and even if weight is still <2,000 grams).
  - Infants who did not receive a birth dose should begin the series as soon as possible (see Table 2 for minimum intervals).
  - Administration of 4 doses is permitted when a combination vaccine containing HepB is used after the birth dose.
  - Minimum intervals (see Table 2): when 4 doses are administered, substitute “dose 4” for “dose 3” in these calculations

- 2 or more doses before age 12 months:
  - 1 dose at least 8 weeks after previous dose

*Unvaccinated = Less than routine series (through age 14 months) OR no doses (age 15 months or older)

- Final (3rd or 4th) dose: age 6–18 months (minimum age 24 weeks)

- Mother is HBsAg-positive
  - Birth dose (monovalent HepB vaccine only): administer HepB vaccine and hepatitis B immune globulin (HBIG) (in separate limbs) within 12 hours of birth, regardless of birth weight.
  - Birth weight <2000 grams: administer 3 additional doses of HepB vaccine beginning at age 1 month (total of 4 doses)
  - Final (3rd or 4th) dose: administer at age 6 months (minimum age 24 weeks)
  - Test for HBsAg and anti-HBs at age 9–12 months. If HepB series is delayed, test 1–2 months after final dose. Do not test before age 9 months.

- Mother is HBsAg-unknown
  If other evidence suggestive of maternal hepatitis B infection exists (e.g., presence of HBV DNA, HBeAg-positive, or mother known to have chronic hepatitis B infection), manage infant as if mother is HBsAg-positive
  - Birth dose (monovalent HepB vaccine only):
    - Birth weight ≥2,000 grams: administer HepB vaccine within 12 hours of birth. Determine mother’s HBsAg status as soon as possible. If mother is determined to be HBsAg-positive, administer HBIG as soon as possible (in separate limb), but no later than 7 days of age.
    - Birth weight <2,000 grams: administer HepB vaccine and HBIG (in separate limbs) within 12 hours of birth. Administer 3 additional doses of HepB vaccine beginning at age 1 month (total of 4 doses)
  - Final (3rd or 4th) dose: administer at age 6 months (minimum age 24 weeks)

Catch-up vaccination

- Unvaccinated persons should complete a 3-dose series at 0, 1–2, 6 months. See Table 2 for minimum intervals

- Adolescents age 11–15 years may use an alternative 2-dose schedule with at least 4 months between doses (adult formulation Recombivax HB® only).

- Adolescents age 18 years may receive:
  - Heplisav-B®: 2-dose series at least 4 weeks apart
  - PreHevBrio®: 3-dose series at 0, 1, and 6 months
  - Combined HepA and HepB vaccine, Twinrix®: 3-dose series (0, 1, and 6 months) or 4-dose series (3 doses at 0, 7, and 21–30 days, followed by a booster dose at 12 months).
Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

**Notes**

- Revaccination is not generally recommended for persons with a normal immune status who were vaccinated as infants, children, adolescents, or adults.

- Post-vaccination serology testing and revaccination (if anti-HBs <10mlU/mL) is recommended for certain populations, including:
  - Infants born to HBsAg-positive mothers
  - Persons who are pre dialysis or on maintenance dialysis
  - Other immunocompromised persons
  - For detailed revaccination recommendations, see www.cdc.gov/vaccines/hcp/acip-recs/vacc-specific/hepb.html.

*Note:* Heplisav-B and PreHevbrio are not recommended in pregnancy due to lack of safety data in pregnant persons.

### Human papillomavirus vaccination

**Recommended dosage:**
- **Minimum age:** 9 years
- **Minimum interval:** 4 weeks
- **Recommended dosing:** 2-dose series or 3-dose series depending on age at initial vaccination:
  - **Age 9–11 years:** 2-dose series at 0, 1–2 months, 6 months (minimum interval: 5 months; repeat dose if administered too soon)
  - **Age 12 years:** 2-dose series at 0, 6–12 months (minimum interval: 5 months; repeat dose if administered too soon)
  - **Age 13 years:**
    - 3-dose series at 0, 1–2 months, 6 months (minimum intervals: dose 1 to dose 2: 4 weeks / dose 2 to dose 3: 12 weeks / dose 1 to dose 3: 5 months; repeat dose if administered too soon)

**Special situations**

- Pregnancy: Pregnancy testing not needed before vaccination; HPV vaccination not recommended until after pregnancy; no intervention needed if vaccinated while pregnant.

### Influenza vaccination

**Recommended dosage:**
- **Minimum age:** 6 months
- **Recommended dosing:** 2-dose series before July 1, 2023
- **Recommended dosing:** 1 dose after July 1, 2023

**Routine vaccination**

- Use any influenza vaccine appropriate for age and health status annually:
  - **Age 6 months–8 years** who have received fewer than 2 influenza vaccine doses before July 1, 2023, or whose influenza vaccination history is unknown: 2 doses, separated by at least 4 weeks. Administer dose 2 even if the child turns 9 years between receipt of dose 1 and dose 2.
  - **Age 6 months–8 years** who have received at least 2 influenza vaccine doses before July 1, 2023: 1 dose
  - **Age 9 years or older:** 1 dose

**Special situations**

- **International travel**
  - Infants age 6–11 months: 1 dose before departure;
  - Revaccinate with 2-dose series at age 12–15 months (12 months for children in high-risk areas) and dose 2 as early as 4 weeks later.*
  - Unvaccinated children age 12 months or older: 2-dose series at least 4 weeks apart before departure*

- **Influenza vaccination**
  - Persons with an egg allergy can receive any influenza vaccine (egg-based and non-egg-based) appropriate for age and health status.

- **MenACWY vaccination**
  - Age 13–15 years: 1 dose now and booster at age 16–18 years (minimum interval: 8 weeks)
  - Age 16–18 years: 1 dose

**Notes**

- If MMRV is used, the minimum interval between MMRV doses is 3 months

### Meningococcal serogroup A,C,W,Y vaccination

**Recommended dosage:**
- **Minimum age:** 2 months
- **Recommended dosing:** 2 doses separated by at least 4 weeks
- **Recommended dosing:** 1 dose after July 1, 2023

**Routine vaccination**

- **Ages 18 Years or Younger,** United States, 2024
- **Minimum age:** 2 months
- **Recommended dosing:** 2-dose series at age 11–12 years; 16 years
- **Recommended dosing:** 3-dose series at age 12–15 months; age 4–6 years
- **Recommended dosing:** 1 dose before departure;

**Catch-up vaccination**

- **Recommended dosing:** 1 dose at age 24 months or older: 2-dose series at least 8 weeks apart
- **Recommended dosing:** 1 dose at age 24 months or older:

**Special situations**

- Immunocompromising conditions, including HIV infection: 3-dose series, even for those who initiate vaccination at age 9 through 14 years.
- History of sexual abuse or assault: Start at age 9 years
- Pregnancy: Pregnancy testing not needed before vaccination; HPV vaccination not recommended until after pregnancy; no intervention needed if vaccinated while pregnant

### Measles, mumps, and rubella vaccination

**Recommended dosage:**
- **Minimum age:** 12 months
- **Recommended dosing:** 2-dose series at age 12–15 months; age 4–6 years
- **Recommended dosing:** 1 dose before departure;

**Routine vaccination**

- **Recommended dosing:** 2 doses at least 4 weeks apart* for persons for 7 days after vaccination.

**Catch-up vaccination**

- **Recommended dosing:** 1 dose at age 24 months or older: 2-dose series at least 8 weeks apart

**Notes**

- If MMRV is used, the minimum interval between MMRV doses is 3 months.
- If LAIV4 is given, revaccinate with 2-dose series at age 12–15 months, age 4–6 years
- For dose 1 in children age 12–47 months, it is recommended to administer MMR and varicella vaccines separately. MMRV* may be used if parents or caregivers express a preference.

**Special situations**

- **International travel**
  - Infants age 6–11 months: 1 dose before departure;
  - Revaccinate with 2-dose series at age 12–15 months (12 months for children in high-risk areas) and dose 2 as early as 4 weeks later.*
  - **Unvaccinated children age 12 months or older:** 2-dose series at least 4 weeks apart before departure*

- **Influenza vaccination**
  - Persons with an egg allergy can receive any influenza vaccine (egg-based and non-egg-based) appropriate for age and health status.
Travel to countries with hyperendemic or epidemic meningococcal disease, including countries in the African meningitis belt or during the Hajj (www.cdc.gov/travel/):

- Children less than age 24 months:
  - **Menveo** (age 2–23 months)
    - Dose 1 at age 2 months: 4-dose series (additional 3 doses at age 4, 6, and 12 months)
    - Dose 1 at age 3–6 months: 3- or 4-dose series (dose 2 and dose 3 if applicable) at least 8 weeks after previous dose until a dose is received at age 7 months or older, followed by an additional dose at least 12 weeks later and after age 12 months
    - Dose 1 at age 7–23 months: 2-dose series (dose 2 at least 12 weeks after dose 1 and after age 12 months)

- Children age 2 years or older: 1 dose Menveo or MenQuadfi

First-year college students who live in residential housing (if not previously vaccinated at age 16 years or older) or military recruits:

- 1 dose Menveo or MenQuadfi

Adolescent vaccination of children who received MenACWY prior to age 10 years:

- Children for whom boosters are recommended because of an ongoing increased risk of meningococcal disease (e.g., those with complement component deficiency, HIV, or asplenia): Follow the booster schedule for persons at increased risk.

- Children for whom boosters are not recommended (e.g., a healthy child who received a single dose for travel to a country where meningococcal disease is endemic): Administer MenACWY according to the recommended adolescent schedule with dose 1 at age 11–12 years and dose 2 at age 16 years.

*Menveo has two formulations: lyophilized and liquid. The liquid formulation should not be used before age 10 years. See www.cdc.gov/vaccines/vpd/mening/downloads/menveo-single-vial-presentation.pdf.

**Notes:** For MenACWY booster dose recommendations for groups listed under “Special situations” and in an outbreak setting and additional meningococcal vaccination information, see www.cdc.gov/mmwr/volumes/69/rr/rr6909a1.htm.

**Children age 10 years or older may receive a single dose of Penbraya as an alternative to separate administration of MenACWY and MenB when both vaccines would be given on the same clinic day (see “Meningococcal serogroup B vaccination” section below for more information).”

### Meningococcal serogroup B vaccination

**Minimum age: 10 years [MenB-4C, Bexsero®; MenB-FHbp, Trumenba®; MenACWY-TT/MenB-FHbp, Penbraya™]**

**Shared clinical decision-making**

**Adolescents not at increased risk age 16–23 years**

- **Bexsero**: 2-dose series at least 1 month apart
- **Trumenba**: 2-dose series at least 6 months apart (if dose 2 is administered earlier than 6 months, administer a 3rd dose at least 4 months after dose 2)

**Note:** Bexsero® and Trumenba® are not interchangeable; the same product should be used for all doses in a series.

For additional information on shared clinical decision-making for MenB, see www.cdc.gov/vaccines/hcp/admin/downloads/isd-job-aid-scdm-mening-b-shared-clinical-decision-making.pdf.

### Mpox vaccination

**Minimum age: 18 years [Jynneos®]**

**Special situations**

- **Age 18 years and at risk for Mpox infection:** 2-dose series, 28 days apart.

**Risk factors for Mpox infection include:**

- Persons who are gay, bisexual, and other MSM, transgender or nonbinary people who in the past 6 months have had:
  - A new diagnosis of at least 1 sexually transmitted disease
  - More than 1 sex partner
  - Sex at a commercial sex venue
  - Sex in association with a large public event in a geographic area where Mpox transmission is occurring
  - Persons who are sexual partners of the persons described above
  - Persons who anticipate experiencing any of the situations described above

**Pregnancy:** There is currently no ACIP recommendation for Jynneos use in pregnancy due to lack of safety data in pregnant persons. Pregnant persons with any risk factor described above may receive Jynneos.

For detailed information, see: www.cdc.gov/vaccines/acip/meetings/downloads/slides-2023-10-25-26/04-MPOX-Rao-508.pdf

### Pneumococcal vaccination

**Minimum age: 6 weeks [PCV15], [PCV 20]; 2 years [PPSV23]**

**Routine vaccination with PCV**

- 4-dose series at 2, 4, 6, 12–15 months

**Catch-up vaccination with PCV**

- Healthy children ages 2–4 years with any incomplete* PCV series: 1 dose PCV
- For other catch-up guidance, see Table 2.

**Note:** For children without risk conditions, PCV20 is not indicated if they have received 4 doses of PCV13 or PCV15 or another age appropriate complete PCV series.
Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

Special situations

Children and adolescents with cerebrospinal fluid leak; chronic heart disease; chronic kidney disease (excluding maintenance dialysis and nephrotic syndrome); chronic liver disease; chronic lung disease (including moderate persistent or severe persistent asthma); cochlear implant; or diabetes mellitus:

Age 2–5 years
- Any incomplete* PCV series with:
  - 3 PCV doses: 1 dose PCV (at least 8 weeks after the most recent PCV dose)
  - Less than 3 PCV doses: 2 doses PCV (at least 8 weeks after the most recent dose and administered at least 8 weeks apart)
- Completed recommended PCV series but have not received PPSV23
  - Previously received at least 1 dose of PCV20: no further PCV or PPSV23 doses needed
  - Not previously received PCV20: administer 1 dose PCV20 or 1 dose PPSV23 at least 8 weeks after the most recent PCV dose.

Age 6–18 years
- Not previously received any dose of PCV13, PCV15, or PCV20: administer 1 dose of PCV15 or PCV20. If PCV15 is used and no previous receipt of PPSV23, administer 1 dose of PPSV23 at least 8 weeks after the PCV15 dose.**
- Received PCV before age 6 years but have not received PPSV23
  - Previously received at least 1 dose of PCV20: no additional dose of PCV or PPSV23
  - Not previously received PCV20: administer 1 dose PCV20 or 1 dose PPSV23 at least 8 weeks after the most recent PCV dose.
- Received PCV13 only at or after age 6 years: administer 1 dose PCV20 or 1 dose PPSV23 at least 8 weeks after the most recent PCV13 dose.
- Received 1 dose PCV13 and 1 dose PPSV23 at or after age 6 years: no further doses of any PCV or PPSV23 indicated.

Children and adolescents on maintenance dialysis, or with immunocompromising conditions such as nephrotic syndrome; congenital or acquired asplenia or splenic dysfunction; congenital or acquired immunodeficiencies; diseases and conditions treated with immunosuppressive drugs or radiation therapy, including malignant neoplasms, leukemias, lymphomas, Hodgkin disease, and solid organ transplant; HIV infection; or sickle cell disease or other hemoglobinopathies:

Age 2–5 years
- Any incomplete* PCV series:
  - 3 PCV doses: 1 dose PCV (at least 8 weeks after the most recent PCV dose)
  - Less than 3 PCV doses: 2 doses PCV (at least 8 weeks after the most recent dose and administered at least 8 weeks apart)
- Completed recommended PCV series but have not received PPSV23
  - Previously received at least 1 dose of PCV20: no further PCV or PPSV23 doses needed
  - Not previously received PCV20: administer 1 dose PCV20 or 1 dose PPSV23 at least 8 weeks after the most recent PCV dose. If PPSV23 is used, administer 1 dose of PCV20 or dose 2 PPSV23 at least 5 years after dose 1 PPSV23.

Age 6–18 years
- Not previously received any dose of PCV13, PCV15, or PCV20: administer 1 dose of PCV15 or 1 dose of PCV20. If PCV15 is used and no previous receipt of PPSV23, administer 1 dose of PPSV23 at least 8 weeks after the PCV15 dose.**
- Received PCV before age 6 years but have not received PPSV23
  - Previously received at least 1 dose of PCV20: no additional dose of PCV or PPSV23
  - Not previously received PCV20: administer 1 dose PCV20 or 1 dose PPSV23 at least 8 weeks after the most recent PCV dose.
  - Received PCV13 only at or after age 6 years: administer 1 dose PCV20 or 1 dose PPSV23 at least 8 weeks after the most recent PCV13 dose.
  - Received 1 dose PCV13 and 1 dose PPSV23 at or after age 6 years: no further doses of any PCV or PPSV23 indicated.

Poliovirus vaccination
(minimum vaccination: 6 weeks)

Routine vaccination
- 4-dose series at ages 2, 4, 6–18 months, 4–6 years; administer the final dose on or after age 4 years and at least 6 months after the previous dose.
- 4 or more doses of IPV can be administered before age 4 years when a combination vaccine containing IPV is used. However, a dose is still recommended on or after age 4 years and at least 6 months after the previous dose.

Catch-up vaccination
- In the first 6 months of life, use minimum ages and intervals only for travel to a polio-endemic region or during an outbreak.
- Adolescents age 18 years known or suspected to be unvaccinated or incompletely vaccinated: administer remaining doses (1, 2, or 3 IPV doses) to complete a 3-dose primary series.* Unless there are specific reasons to believe they were not vaccinated, most persons aged 18 years or older born and raised in the United States can assume they were vaccinated against polio as children.

Series containing oral poliovirus vaccine (OPV), either mixed OPV-IPV or OPV-only series:
- Total number of doses needed to complete the series is the same as that recommended for the U.S. IPV schedule. See www.cdc.gov/mmwr/volumes/66/wr/mm6601a6.htm?s_cid=mm6601a6_w.
- Only trivalent OPV (tOPV) counts toward the U.S. vaccination requirements.
  - Doses of OPV administered before April 1, 2016, should be counted (unless specifically noted as administered during a campaign).
  - Doses of OPV administered on or after April 1, 2016, should not be counted.
  - For guidance to assess doses documented as “OPV,” see www.cdc.gov/mmwr/volumes/66/wr/mm6606a7.htm?s_cid=mm6606a7_w.
- For other catch-up guidance, see Table 2.

For guidance on determining which pneumococcal vaccines a patient needs and when, please refer to the mobile app, which can be downloaded here: www.cdc.gov/vaccines/vpd/pneumo/hcp/pneumoapp.html
Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

Special situations
- Adolescents aged 18 years at increased risk of exposure to poliovirus and completed primary series*: may administer one lifetime IPV booster.

*Note: Complete primary series consist of at least 3 doses of IPV or trivalent oral poliovirus vaccine (tOPV) in any combination.

For detailed information, see: www.cdc.gov/vaccines/vpd/polio/hcp/recommendations.html

Respiratory syncytial virus immunization (minimum age: birth [Nirsevimab, RSV-mAb Beyfortus™])

Routine immunization
- Infants born October – March in most of the continental United States*
  - Mother did not receive RSV vaccine OR mother’s RSV vaccination status is unknown: administer 1 dose nirsevimab within 1 week of birth in hospital or outpatient setting.
  - Mother received RSV vaccine less than 14 days prior to delivery: administer 1 dose nirsevimab within 1 week of birth in hospital or outpatient setting.
  - Mother received RSV vaccine at least 14 days prior to delivery: nirsevimab not needed but can be considered in rare circumstances at the discretion of healthcare providers.

Infants born April–September in most of the continental United States*
- Mother did not receive RSV vaccine OR mother’s RSV vaccination status is unknown: administer 1 dose nirsevimab shortly before start of RSV season.
- Mother received RSV vaccine less than 14 days prior to delivery: administer 1 dose nirsevimab shortly before start of RSV season.
- Mother received RSV vaccine at least 14 days prior to delivery: nirsevimab not needed but can be considered in rare circumstances at the discretion of healthcare providers.

For infants with prolonged birth hospitalization** (e.g., for prematurity) discharged October through March should be immunized shortly before or promptly after discharge.

Nirsevimab can be administered to children who are eligible to receive palivizumab. Children who have received nirsevimab should not receive palivizumab for the same RSV season.

For further guidance, see www.cdc.gov/mmwr/volumes/72/wr/mm7234a4.htm and www.cdc.gov/vaccines/vpd/rsv/hcp/child-faqs.html

Respiratory syncytial virus vaccination (RSV [Abrysvo™])

Routine vaccination
- Pregnant at 32 weeks 0 days through 36 weeks and 6 days gestation from September through January in most of the continental United States*: 1 dose RSV vaccine (Abrysvo™). Administer RSV vaccine regardless of previous RSV infection.
  - Either maternal RSV vaccination or infant immunization with nirsevimab (RSV monoclonal antibody) is recommended to prevent respiratory syncytial virus lower respiratory tract infection in infants.

- All other pregnant persons: RSV vaccine not recommended.

There is currently no ACIP recommendation for RSV vaccination in subsequent pregnancies. No data are available to inform whether additional doses are needed in later pregnancies.

*Note: Providers in jurisdictions with RSV seasonality that differs from most of the continental United States (e.g., Alaska, jurisdiction with tropical climate) should follow guidance from public health authorities (e.g., CDC, health departments) or regional medical centers on timing of administration based on local RSV seasonality.

Rotavirus vaccination (minimum age: 6 weeks)

Routine vaccination
- RotaTeq*: 2-dose series at age 2 and 4 months
- Rotarix*: 3-dose series at age 2, 4, and 6 months
- If any dose in the series is either RotaTeq® or unknown, default to 3-dose series.

Catch-up vaccination
- Do not start the series on or after age 15 weeks, 0 days.
- The maximum age for the final dose is 8 months, 0 days.
- For other catch-up guidance, see Table 2.
**Tetanus, diphtheria, and pertussis (Tdap) vaccination**

(minimum age: 11 years for routine vaccination, 7 years for catch-up vaccination)

**Routine vaccination**
- **Age 11–12 years**: 1 dose Tdap (adolescent booster)
- **Pregnancy**: 1 dose Tdap during each pregnancy, preferably in early part of gestational weeks 27–36.

**Note**: Tdap may be administered regardless of the interval since the last tetanus- and diphtheria-toxoid-containing vaccine.

**Catch-up vaccination**
- **Age 13–18 years who have not received Tdap**: 1 dose Tdap (adolescent booster)
- **Age 7–18 years not fully vaccinated** with DTaP: 1 dose Tdap as part of the catch-up series (preferably the first dose); if additional doses are needed, use Td or Tdap.
- **Tdap administered at age 7–10 years**:
  - **Age 7–9 years**: who receive Tdap should receive the adolescent Tdap booster dose at age 11–12 years.
  - **Age 10 years**: who receive Tdap do not need the adolescent Tdap booster dose at age 11–12 years.
- **DTaP inadvertently administered on or after age 7 years**
  - **Age 7–9 years**: DTaP may count as part of catch-up series. Administer adolescent Tdap booster dose at age 11–12 years.
  - **Age 10–18 years**: Count dose of DTaP as the adolescent Tdap booster dose.
- **For other catch-up guidance, see Table 2.**

**Special situations**
- **Wound management** in persons age 7 years or older with history of 3 or more doses of tetanus-toxoid-containing vaccine: For clean and minor wounds, administer Tdap or Td if more than 10 years since last dose of tetanus-toxoid-containing vaccine; for all other wounds, administer Tdap or Td if more than 5 years since last dose of tetanus-toxoid-containing vaccine. Tdap is preferred for persons age 11 years or older who have not previously received Tdap or whose Tdap history is unknown. If a tetanus-toxoid-containing vaccine is indicated for a pregnant adolescent, use Tdap.
- **For detailed information, see** [www.cdc.gov/mmwr/volumes/69/wr/mm6903a5.htm](http://www.cdc.gov/mmwr/volumes/69/wr/mm6903a5.htm).

*Fully vaccinated = 5 valid doses of DTaP OR 4 valid doses of DTaP if dose 4 was administered at age 4 years or older

---

**Varicella vaccination**

(minimum age: 12 months)

**Routine vaccination**
- 2-dose series at age 12–15 months, 4–6 years
- **VAR or MMRV may be administered**
- Dose 2 may be administered as early as 3 months after dose 1 (a dose inadvertently administered after at least 4 weeks may be counted as valid)

**Note**: For dose 1 in children age 12–47 months, it is recommended to administer MMR and varicella vaccines separately. MMRV may be used if parents or caregivers express a preference.

**Catch-up vaccination**
- Ensure persons age 7–18 years without evidence of immunity (see MMWR at [www.cdc.gov/mmwr/pdf/rr/rr5604.pdf](http://www.cdc.gov/mmwr/pdf/rr/rr5604.pdf)) have a 2-dose series:
  - **Age 7–12 years**: Routine interval: 3 months
  - **Age 13 years and older**: Routine interval: 4–8 weeks (minimum interval: 4 weeks)
  - **The maximum age for use of MMRV is 12 years.**

</table>
| Dengue (DENACVD)                    | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Severe infection (e.g., hemorrhagic and solid tumors, receipt of chemotherapy, congenital immunodeficiency, long-term immunosuppressive therapy or patients with HIV infection who are severely immunocompromised)
|                                    | • Lack of laboratory confirmation of a previous Dengue infection
|                                    | • Pregnancy
|                                    | • HIV infection without evidence of severe immunosuppression
|                                    | • Moderate or severe acute illness with or without fever
| Diphtheria, tetanus, pertussis (DTaP) | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • For DTaP only: Encephalopathy (e.g., coma, decreased level of consciousness, prolonged seizures) not attributable to another identifiable cause within 7 days of administration of previous dose of DTP or DTaP
|                                    | • Guillain–Barre syndrome (GBS) within 6 weeks after previous dose of tetanus-toxoid–containing vaccine
|                                    | • History of Arthus-type hypersensitivity reactions after a previous dose of diphtheria–toxoid–containing or tetanus–toxoid–containing vaccine; defer vaccination until at least 10 years have elapsed since the last tetanus–toxoid–containing vaccine
|                                    | • For DTaP only: Progressive neurologic disorder, including infantile spasms, uncontrolled epilepsy, progressive encephalopathy; defer DTaP until neurologic status clarified and stabilized
|                                    | • Moderate or severe acute illness with or without fever
| Haemophilus influenzae type b (Hib) | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Less than age 6 weeks
|                                    | • Moderate or severe acute illness with or without fever
| Hepatitis A (HepA)                 | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component including neomycin
|                                    | • Pregnancy
|                                    | • High-risk pregnancy
|                                    | • Moderate or severe acute illness with or without fever
| Hepatitis B (HepB)                 | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component including yeast
|                                    | • Pregnancy: Hepatitis B and PreHevbrio are not recommended due to lack of safety data in pregnant persons. Use other hepatitis B vaccines if HepB is indicated
|                                    | • Moderate or severe acute illness with or without fever
| Hepatitis A-Hepatitis B vaccine (HepA-HepB) [Twinrix] | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component including neomycin and yeast
|                                    | • Moderate or severe acute illness with or without fever
| Human papillomavirus (HPV)         | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Pregnancy: HPV vaccination not recommended
|                                    | • Moderate or severe acute illness with or without fever
| Measles, mumps, rubella (MMR)      | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Severe immunodeficiency (e.g., hematologic and solid tumors, receipt of chemotherapy, congenital immunodeficiency, long-term immunosuppressive therapy or patients with HIV infection who are severely immunocompromised)
|                                    | • Pregnancy
|                                    | • Family history of altered immunocompetence, unless verified clinically or by laboratory testing as immunocompetent
|                                    | • Recent (<11 months) receipt of antibody-containing blood product (specific interval depends on product)
|                                    | • History of thrombocytopenia or thrombocytopenic purpura
|                                    | • Need for tuberculin skin testing or interferon-gamma release assay (IGRA) testing
|                                    | • For MMRV only: Personal or family (i.e., sibling or parent) history of seizures of any etiology
|                                    | • Moderate or severe acute illness with or without fever
| Meningococcal ACWY (MenACWY)       | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • For MenACWY-CRM only: severe allergic reaction to any diphtheria toxoid—or CRM197—containing vaccine
|                                    | • For MenACWY-TT only: severe allergic reaction to a tetanus toxoid-containing vaccine
|                                    | • For MenACWY-CRM only: Preterm birth if less than age 9 months
|                                    | • Moderate or severe acute illness with or without fever
| Meningococcal B (MenB) [MenB-4C (Menveo)] | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • For MenB-4C only: Latex sensitivity
|                                    | • Moderate or severe acute illness with or without fever
| Meningococcal ABCWY (MenACWY-TT, MenB-4C-HBP [Penbraya]) | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Severe reaction to a tetanus toxoid-containing vaccine
|                                    | • Moderate or severe acute illness, with or without fever
| Mumps (Jynneos)                    | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • For Mumps only: Personal or family (i.e., sibling or parent) history of seizures of any etiology
|                                    | • Moderate or severe acute illness with or without fever
| Pneumococcal conjugate (PCV)       | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Severe allergic reaction (e.g., anaphylaxis) to any diphtheria–toxoid–containing vaccine or its component
|                                    | • Moderate or severe acute illness with or without fever
| Pneumococcal polysaccharide (PPSV23) | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Moderate or severe acute illness with or without fever
| Poliovirus vaccine, inactivated (IPV) | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Pregnancy
|                                    | • Moderate or severe acute illness with or without fever
| RSV monoclonal antibody (RSV-mAb)  | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Moderate or severe acute illness with or without fever
| Respiratory syncytial virus vaccine (RSV) | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Moderate or severe acute illness with or without fever
| Rotavirus (RV) [Rotarix]           | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Severe gastrointestinal disease (SCID)
|                                    | • History of intussusception
|                                    | • Altered immunocompetence other than SCID
|                                    | • Chronic gastrointestinal disorder
|                                    | • RV1 only: Spina bifida or bladder exstrophy
|                                    | • Moderate or severe acute illness with or without fever
| Tetanus, diphtheria, and acellular pertussis (Tdap) | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • For Tdap only: Encephalopathy (e.g., coma, decreased level of consciousness, prolonged seizures) not attributable to another identifiable cause within 7 days of administration of previous dose of DTP or DTaP
|                                    | • Guillain–Barre syndrome (GBS) within 6 weeks after a previous dose of tetanus–toxoid–containing vaccine
|                                    | • History of Arthus-type hypersensitivity reactions after a previous dose of diphtheria–toxoid–containing or tetanus–toxoid–containing vaccine; defer vaccination until at least 10 years have elapsed since the last tetanus–toxoid–containing vaccine
|                                    | • For Tdap only: Progressive or unstable neurological disorder, uncontrolled seizures, or progressive encephalopathy until a treatment regimen has been established and the condition has stabilized
|                                    | • Moderate or severe acute illness with or without fever
| Varicella (VZV)                    | • Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component
|                                    | • Severe immunodeficiency (e.g., hematologic and solid tumors, receipt of chemotherapy, congenital immunodeficiency, long-term immunosuppressive therapy or patients with HIV infection who are severely immunocompromised)
|                                    | • Family history of altered immunocompetence, unless verified clinically or by laboratory testing as immunocompetent
|                                    | • Recent (<11 months) receipt of antibody-containing blood product (specific interval depends on product)
|                                    | • Receipt of specific antiviral drugs (acyclovir, famciclovir, or valacyclovir) 24 hours before vaccination (avoid use of these antiviral drugs for 14 days after vaccination)
|                                    | • Use of aspirin or aspirin-containing products
|                                    | • Moderate or severe acute illness with or without fever
|                                    | • If using MMRV, see MMR/MMRV for additional precautions

1. When a contraindication is present, a vaccine should NOT be administered. Kroger A, Bahta L, Hunter P. ACIP General Best Practice Guidelines for Immunization. www.cdc.gov/vaccines/hcp/acip-recs/general-recs/contraindications.html
2. When a precaution is present, vaccination should generally be deferred but might be indicated if the benefit of protection from the vaccine outweighs the risk for an adverse reaction. Kroger A, Bahta L, Hunter P. ACIP General Best Practice Guidelines for Immunization. www.cdc.gov/vaccines/hcp/acip-recs/general-recs/contraindications.html
3. Vaccination providers should check FDA-approved prescribing information for the most complete and updated information, including contraindications, warnings, and precautions. Package inserts for U.S.-licensed vaccines are available at www.fda.gov/vaccines-blood-biologics/approved-products/vaccines-licensed-use-united-states.
4. For information on the pregnancy exposure registries for persons who were inadvertently vaccinated with Heplisav-B or PreHevbrio while pregnant, please visit heplisavbpregnancyregistry.com or www.prehevbrio.com/#safety.
5. Full prescribing information for BEYFORTIS (miravib-mAb) www.accessdata.fda.gov/drugsatfda_docs/label/2023/761328s000lbl.pdf
In addition to the recommendations presented in the previous sections of this immunization schedule, ACIP has approved the following recommendations by majority vote since October 26, 2023. The following recommendations have been adopted by the CDC Director and are now official. Links are provided if these recommendations have been published in *Morbidity and Mortality Weekly Report (MMWR)*.

*The effective date is the date when the CDC director adopted the recommendation and when the ACIP recommendation became official.*
