

DP18-1816: Well-Integrated Screening and Evaluation for WOMen Across the Nation (WISEWOMAN)

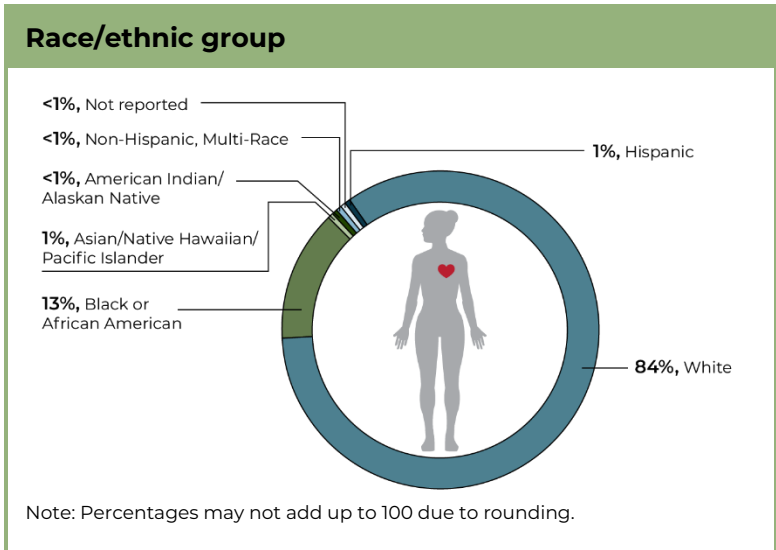

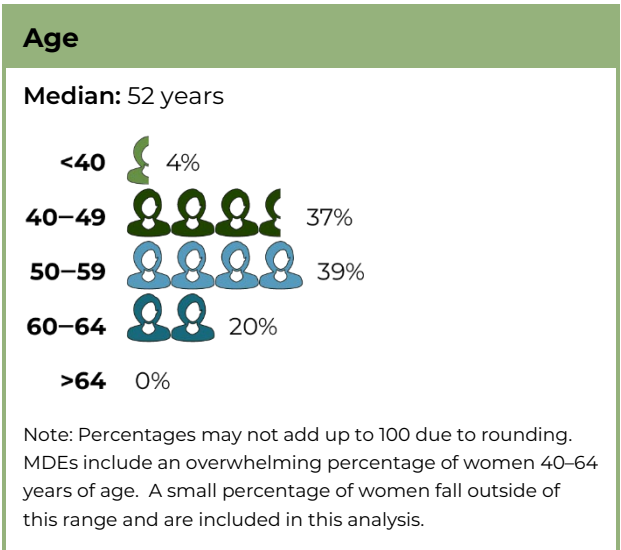

West Virginia • Program Years 1 & 2 (September 2018 – September 2020) Recipient Profile¹

The **West Virginia Department of Health** is a recipient of the CDC-funded WISEWOMAN cooperative agreement (CDC-RFA-DP18-1816). The WISEWOMAN program provides heart disease and stroke risk factor screenings and services to promote healthy behaviors to low-income, uninsured, and underinsured women aged 40 to 64 years. As a WISEWOMAN recipient, West Virginia is implementing the following strategies to improve the diagnosis, care, and management of women with hypertension: (1) strengthen clinical quality measurement, (2) support team-based care, and (3) facilitate community-clinical linkages.

WISEWOMAN participants in Program Years 1 and 2

WISEWOMAN recipients submit data to CDC biannually describing the number of women served and the types of services received. During Program Years 1 and 2 (September 30, 2018 – September 29, 2020), the **West Virginia WISEWOMAN program served 529 women**; distribution of participants by age and race/ethnicity is shown below.²

¹ This profile provides an overview of the activities and key achievements during Program Years 1 and 2 of the WISEWOMAN DP18-1816 program (September 2018 – September 2020), as reported within recipients' annual evaluation reports, annual progress reports for Program Years 1 and 2, annual performance measure report as of December 31, 2020, and Minimum Data Elements (MDEs). For more information, please contact DHDSPEvaluation@cdc.gov.

² Based on an analysis of MDE data for women who were screened in Program Years 1 and 2, including complete, BP+, and incomplete screening records (n = 529).

³ High blood pressure is defined as systolic blood pressure > 139 mmHg or diastolic blood pressure > 89mmHg.

WISEWOMAN strategies to promote cardiovascular health

The WISEWOMAN program uses **evidence-based approaches to heart disease and stroke prevention** within health care systems and throughout communities. Women who are screened and found to have high blood pressure, diabetes, or high blood cholesterol receive clinical care and are referred to healthy behavior support services (HBSS), including lifestyle programs, health coaching, and risk reduction strategies with community support. Below, we describe the West Virginia program’s approach to this work and provide updates on West Virginia’s performance measures at the end of Program Year 2.⁴

Strategy 1. Track and monitor clinical measures shown to improve healthcare quality and identify patients with hypertension

The WISEWOMAN program aims to **improve sharing and use of clinical data** among providers to facilitate care coordination and promote better health outcomes.

Highlights from West Virginia
<ul style="list-style-type: none"> Developed and reviewed data reports to monitor referrals and outcomes for participants with uncontrolled hypertension. Provided technical assistance to WISEWOMAN providers on the use of data to monitor participants with hypertension.

Performance measures
<p>100% of WISEWOMAN participants were screened by providers that have a protocol for identifying patients with undiagnosed hypertension (554 women).</p> <hr/> <p>NR⁵ of WISEWOMAN providers implemented a community referral system (through bi-directional referrals) for HBSS for people with high risk for CVD.</p>

Strategy 2. Implement team-based care to reduce CVD risk with a focus on hypertension control and management

Use of team-based care helps ensure provider adherence to evidence-based guidelines and policies for participants with high blood pressure and high cholesterol and increases participation of non-physician team members. This approach also helps participants manage their own health and CVD risk factors.

Highlights from West Virginia
<ul style="list-style-type: none"> Used a team-based care assessment tool to gauge clinics' use of team-based care and provide technical assistance, as needed. Trained clinical providers on use of team-based care.

Performance measures
<p>100% of WISEWOMAN participants were screened by providers that have policies or systems to implement a multidisciplinary team-based approach to blood pressure control (554 women).</p>

Strategy 3. Link community resources and clinical services that support bi-directional referrals, self-management, and lifestyle change for women at risk for CVD

Linkages to HBSS, including health coaching and lifestyle programs (LSPs), help engage participants in the WISEWOMAN program. West Virginia’s LSP partners include the National Diabetes Prevention Program, Expanded Food and Nutrition Education Program, and Weight Watchers.

Highlights from West Virginia
<ul style="list-style-type: none"> Encouraged providers to use the community resource list in West Virginia Health Connection. Developed a bi-directional referral system through West Virginia Health Connection to link clinical providers to HBSS resources.

Performance measures
<p>100% of WISEWOMAN participants were referred to an appropriate HBSS (554 women).</p> <hr/> <p>100% of WISEWOMAN participants who were referred to an HBSS and attended at least one session (554 women).</p>

The activities described above contribute to improved health outcomes related to blood pressure control. As a long-term measure, this will be reported in subsequent years.

⁴Based on an analysis of performance measure data for women who were served in Program Years 1 and 2 (n = 554). This data source is different than the MDE data reported on Page 1.

⁵ NR = Not reported; reporting of this measure is not required.
