

## **World AIDS Day 2021**

**Annelisa M.:** In this World AIDS Day, in 2021, we now have couples where one is negative and the other one is positive. The one positive being on ARV treatment with a suppressed viral load—those couples can have babies, and the negative one still remains negative. There's no more reason for stigma. We're now speaking U is equal to U, and undetectable is untransmittable.
