2021 CLABSI Medical Record Abstraction Tool

Refer to associated 2021 MRAT instructions

1. IDENTI	FIERS AND A	BSTRACTE	D DATA: Use Tal	oles on page 1 to document information	n as neede	d to answ	er questions b	peginning on page 2.		
State	Facility (NH	ISN) OrgID		(circle): ACH / LTACH / CancerH / Other/			of Audit/	/		
Patient ID	-			Patient DOB//		Revie	wer Initials			
Review Start	Time:			End Time:			Time spent reviewing this record (minutes):			
FACILITY Adr	nission Date:	//		FACILITY Discharge Date://		·				
2. SCREENI	NG QUESTIC	NS								
	•••	•	ens collected on o , or the next day		 Yes -> Continue to 2-2 No -> (i.e., <u>ALL</u> positive blood specimens were drawn <u>before</u> facility day 3) there was no HAI-CLABSI Event. STOP, record outcome (a) No candidate VL CLABSI 					
	iy positive blo er VL discharg		ns taken during A	NY validation location (VL) stay, or on t			Continue to STOP, record	2-3 outcome (a) No candidate VL CLABSI		
2-3. Was cer time?	itral line (CL) i	n place for 3	>2 calendar days	AND in place during a VL stay for any p			Continue to 2 STOP, record	2-4 outcome (a) No candidate VL CLABSI		
 2-4. Did the positive blood specimens meet one of the following criteria? a. <i>Campylobacter</i> spp., <i>C. difficile</i>, Enteropathogenic <i>E. coli</i>, Enterohemorrhagic <i>E. coli</i>, Vibrio spp, Salmonella spp., Shigella spp., Listeria spp., Yersinia spp. (These organisms are excluded pathogens for LCBI. They may be secondary BSIs but will not be reported as the sole pathogen in a primary BSI.) b. <i>Blastomyces</i>, <i>Histoplasma</i>, <i>Coccidioides</i>, <i>Paracoccidioides</i>, <i>Cryptococcus</i>, <i>Pneumocystis</i> (These organisms are typically causes of community-associated infections and are rarely known to cause healthcare-associated infections, and therefore are excluded.) c. Companion common commensal organisms identified by culture. d. Negative culture within a range of two days before and day after a positive NCT with a recognized pathogen. 							 No -> Continue Yes -> STOP, record outcome (a) No candidate VL CLABSI

3. LAB	3. LABORATORY CONFIRMED BLOOD STREAM INFECTION (LCBI) CRITERIA							
					tial Laboratory Confirmed Bloodstream In 1, LCBI 2, or LCBI 3) was met, if any.	fection (LCBI), using table colun	nns in the MRAT Instructions;	

4. Did	4. Did Infection Episode Qualify as LCBI Event? (begin loop)									
□ No	If LCBI definition was NOT met, record outcome (b) No LCBI, and reason (i.e., unmatched common commensal, asymptomatic matched common commensals, or alternative primary site infection with secondary BSI), and continue to next Infection Event. If no more positive blood specimens, STOP									
Yes	If Yes LCBI, document type of LCBI and Date of Event below. Note: there may be more than one LCBI during an episode of care.									
	Type of LCBI (<i>circle one</i>):						Date of LCBI Event (date FIRST of required elements was met during the LCBI IWP):			
First LCBI	LCBI 1	MBI LCBI 1	LCBI 2	MBI LCBI 2	LCBI 3	MBI LCBI 3				
Second LCBI	LCBI 1	MBI LCBI 1	LCBI 2	MBI LCBI 2	LCBI 3	MBI LCBI 3				
Third LCBI	LCBI 1	LCBI 1 MBI LCBI 1 LCBI 2 MBI LCBI 2 LCBI 3 MBI LCBI 3								
Add rows	if needed	d	•	•						

nal Center for Emerging and Zonnotic Infectious Disease

Dic	I LCBI occur during the time period of 2 days before facility admission to the day after facility admission (POA)?
□ Yes	If Yes, LCBI was POA; document outcome (c) POA LCBI type and evaluate next positive blood specimen outside of the event LCBI RIT.
	If no more blood specimens, STOP
🗆 No	If No, proceed to 6.
6. HA	I-LCBI vs CLABSI?
6a Was	this HAI-LCBI a CLABSI
🗆 Yes	If Yes, HAI-LCBI is CLABSI; proceed to 6b.
🗆 No	If No, document outcome (d) HAI-LCBI not CLABSI and evaluate next positive blood specimen with date of event outside the LCBI RIT.
	If no more blood specimens, STOP
6b Was	there medical documentation of the patient suspected or observed self-injecting into their vascular access device within the infection window period?
🗆 Yes	If Yes, document outcome (d) HAI-LCBI not CLABSI and evaluate next positive blood specimen with date of event outside the LCBI RIT.
	If no more blood specimens, STOP
🗆 No	If No, HAI-LCBI is CLABSI; proceed to 6c.
6c Was	there pus at the site of one of the following vascular access devices and a specimen collected from that site has at least one matching organism to an organism
identifi	ed in blood
🗆 Yes	If Yes, then disassociate the LCBI from the central line – document outcome (d) HAI-LCBI not CLABSI and evaluate next positive blood specimen with date of
	event outside of the LCBI RIT.
□ No	If No, HAI-LCBI is CLABSI; proceed to 7.

7. WAS	VALIDATION LOCATION (VL) the Location of Attribution (LOA)?
7a. Was	patient in a VL on date of LCBI Event or day before Event?
□ Yes	If Yes, proceed to b.
□ No	If No, document outcome (e) CLABSI not VL attributable and evaluate next positive blood specimen with date of event outside the previous LCBI RIT. If no more blood specimens, STOP
7h Was	patient transferred to VL from another bedded inpatient location, on date of LCBI Event or day before Event?
	If Yes, location of attribution was the <u>transferring location</u> . Proceed to c.
🗆 No	If No, location of attribution was location at time of infection; STOP record outcome (f) VL CLABSI
7c. Was	the transferring location a validation location (VL)?
□ Yes	If Yes, location of attribution (transferring location) WAS a validation location; STOP record outcome (f) VL CLABSI
🗆 No	If No, location of attribution (transferring location) was NOT a validation location; record outcome (e) CLABSI not VL attributable and evaluate next positive
	blood specimen with date of event outside the previous LCBI RIT.
	If no more blood specimens, STOP
